Being Human In A Technological Age:

Being Human in a Technological Age Steven C. van den Heuvel, 2020 What does it mean to be human This age old question has gained new urgency in the light of current technological developments This volume addresses these developments as well as the impact they have on human self understanding particularly from the perspective of Christian theological anthropology This volume consists of fourteen chapters divided into four different parts The first part explores the challenges that contemporary technology poses with regard to human self understanding In the second part the conceptual assumptions of technological developments themselves are critically questioned The third part offers theological perspectives on technological developments and assumptions The fourth and last part of the book returns to the empirical realm describing the ethical challenges that can be experienced living with complex technology **Life 3.0** Max Tegmark, 2018-07-31 NEW YORK TIMES BESTSELLER How will Artificial Intelligence affect crime war justice jobs society and our very sense of being human The rise of AI has the potential to transform our future more than any other technology and there s nobody better qualified or situated to explore that future than Max Tegmark an MIT professor who s helped mainstream research on how to keep AI beneficial How can we grow our prosperity through automation without leaving people lacking income or purpose What career advice should we give today s kids How can we make future AI systems more robust so that they do what we want without crashing malfunctioning or getting hacked Should we fear an arms race in lethal autonomous weapons Will machines eventually outsmart us at all tasks replacing humans on the job market and perhaps altogether Will AI help life flourish like never before or give us more power than we can handle What sort of future do you want This book empowers you to join what may be the most important conversation of our time It doesn t shy away from the full range of viewpoints or from the most controversial issues from superintelligence to meaning consciousness and the ultimate physical limits on life in the cosmos [How to Be Human in the Digital Economy](#) Nicholas Agar, 2019-03-12 An argument in favor of finding a place for humans and humanness in the future digital economy In the digital economy accountants baristas and cashiers can be automated out of employment so can surgeons airline pilots and cab drivers Machines will be able to do these jobs more efficiently accurately and inexpensively But Nicholas Agar warns in this provocative book these developments could result in a radically disempowered humanity The digital revolution has brought us new gadgets and new things to do with them The digital revolution also brings the digital economy with machines capable of doing humans jobs Agar explains that developments in artificial intelligence enable computers to take over not just routine tasks but also the kind of mind work that previously relied on human intellect and that this threatens human agency The solution Agar argues is a hybrid social digital economy The key value of the digital economy is efficiency The key value of the social economy is humanness A social economy would be centered on connections between human minds We should reject some digital automation because machines will always be poor substitutes for humans in roles that involve direct contact

with other humans A machine can count out pills and pour out coffee but we want our nurses and baristas to have minds like ours In a hybrid social digital economy people do the jobs for which feelings matter and machines take on data intensive work But humans will have to insist on their relevance in a digital age
