

College Preparatory Mathematics (Algebra 2)

Goals

Goals for Algebra 2 include all the goals stated for Algebra 1 and Geometry with emphasis on learning to:

- use problem solving strategies in conjunction with a knowledge of the inter-connections among algebra, geometry, and functions to analyze problems and formulate appropriate solutions and to extend current knowledge by making new connections;
- visualize, express, interpret, and graph functions (and their inverses, when they exist) and some relations in various positions in two dimensions. Given the graph, be able to represent it with an equation including the following:

linear
quadratic
other polynomial

exponential
absolute value
sine, cosine, tangent

logarithmic
simple rational
square root

circles
ellipses
hyperbolas

as well as other functions and real world problems associated with graphs;

- use variables to represent relations from tables, graphs, verbally stated problems, and geometric diagrams and understand that algebraic relations can be tested by substitutions of numbers;
- solve any real linear or quadratic equation in one variable, mixed systems in two variables, and linear systems of equations in three or more variables;
- use ratio, proportion, and direct variation from numerical, geometric, and algebraic perspectives (percent, similarity, right triangles, slope, and probability);
- use the properties of algebra to reorganize algebraic expressions in order to put them into more useful forms;
- extend the use of trigonometry to the laws of sines and cosines and connect right triangle definitions with the trigonometric functions;
- construct convincing arguments and proofs to support or prove assertions and communicate mathematical ideas clearly using appropriate vocabulary;
- apply mathematics to problems in economics, biology, chemistry, and physics; and,
- use elementary probability and statistics to solve problems.
