Applied Colloid and Surface Chemistry Richard M. Pashley, Marilyn E. Karaman, 2004-12-10 Applied Colloid and Surface Chemistry is a broad introduction to this interdisciplinary field Taking a genuinely applied approach with applications drawn from a wide range of industries this book will meet the demands of the student and professional currently working in the field The text includes keynote sections written by practicing industrial research scientists bringing to the reader a wealth of real industrial examples These examples range from water treatment through to soil management as well as examples taken from the coatings and photographic industries To aid accessibility some of the more demanding mathematical derivations are separated from the main text enabling them to be avoided as required With carefully structured chapters starting with learning objectives and containing tutorial questions with answers and explanatory notes this text is invaluable for undergraduates taking a first course on colloid and surface chemistry This book will also be suitable to postgraduates and professionals who need an up to date account of the subject

Surface and Colloid Chemistry in Natural Waters and Water Treatment R. Beckett, 2013-06-29 The discipline of surface and colloid chemistry has experienced a considerable resurgence since the early sixties This perhaps reflects a growing realisation of the wide applicability of modern colloid and surface theory to many important industrial medical and environmental problems This increased activity has resulted in a very complex and at times even confusing area of science being consolidated within a firm theoretical framework The clearer insights gained into the underlying principles have no doubt acted in an autocatalytic manner to stimulate further interest in an expanding range of applications A good example in the area of environmental chemistry has been the realization of the important role played by colloidal material and surface interactions in natural biogeochemical processes that has been the subject of increasing attention over the last few decades This is well illustrated by the numerous studies carried out to elucidate the speciation toxicity transport and fate of pollutants in aquatic systems In the vast majority of cases these have clearly implicated some involvement of an association between the pollutant e.g. trace metal toxic organic compound or nutrient and a colloidal component e.g. particle humic substance foam In order to understand these interactions fully and their effect on pollutant mobility it is important to develop a full appreciation of the surface chemistry of these complex systems Australian scientists have long been prominent in the area of colloid and surface chemistry particularly during the latter half of this century
