Categorical Combinators Sequential Algorithms And Functional Programming:

Categorical Combinators, Sequential Algorithms, and Functional Programming P.-L. Curien, 2012-12-06 This book is a revised edition of the monograph which appeared under the same title in the series Research Notes in Theoretical Computer Science Pit man in 1986 In addition to a general effort to improve typography English and presentation the main novelty of this second edition is the integration of some new material Part of it is mine mostly jointly with coauthors Here is brief guide to these additions I have augmented the account of categorical combinatory logic with a description of the confluence properties of rewriting systems of categorical combinators Hardin Yokouchi and of the newly developed calculus of explicit substitutions Abadi Cardelli Curien Hardin Levy and Rios which are similar in spirit to the categorical combinatory logic but are closer to the syntax of λ calculus Section 1.2 The study of the full abstraction problem for PCF and extensions of it has been enriched with a new full abstraction result the model of sequential algorithms is fully abstract with respect to an extension of PCF with a control operator Cartwright Felleisen Curien An order extensional model of error sensitive sequential algorithms is also fully abstract for a corresponding extension of PCF with a control operator and errors Sections 2.6 and 4.1 I suggest that sequential algorithms lend themselves to a decomposition of the function spaces that leads to models of linear logic Lamarche Curien and that connects sequentiality with games Joyal Blass Abramsky Sections 2.1 and 2.6

PARLE '93 Parallel Architectures and Languages Europe Arndt Bode, Mike Reeve, 1993-06-07 Parallel processing offers a solution to the problem of providing the processing power necessary to help understand and master the complexity of natural phenomena and engineering structures By taking several basic processing devices and connecting them together the potential exists of achieving a performance many times that of an individual device However building parallel application programs is today recognized as a highly complex activity requiring specialist skills and in depth knowledge PARLE is an international European based conference which focuses on the parallel processing subdomain of informatics and information technology It is intended to become THE European forum for interchange between experts in the parallel processing domain and to attract both industrial and academic participants with a technical programme designed to provide a balance between theory and practice This volume contains the proceedings of PARLE 93 The PARLE conference came into existence in 1987 as an initiative from the ESPRIT I programme and the format was revised in 1991 92 PARLE 93 is the second conference with the new format and was held in Munich
Higher-Order Computability John Longley, Dag Normann, 2015-11-06 This book offers a self contained exposition of the theory of computability in a higher order context where computable operations may

themselves be passed as arguments to other computable operations The subject originated in the 1950s with the work of Kleene Kreisel and others and has since expanded in many different directions under the influence of workers from both mathematical logic and computer science The ideas of higher order computability have proved valuable both for elucidating the constructive content of logical systems and for investigating the expressive power of various higher order programming languages In contrast to the well known situation for first order functions it turns out that at higher types there are several different notions of computability competing for our attention and each of these has given rise to its own strand of research In this book the authors offer an integrated treatment that draws together many of these strands within a unifying framework revealing not only the range of possible computability concepts but the relationships between them The book will serve as an ideal introduction to the field for beginning graduate students as well as a reference for advanced researchers
