Cosmos And Theos:

Cosmos, Bios, Theos Henry Margenau, Roy Abraham Varghese, 1992 Stranger and more momentous than the strangest of scientific theories is the appearance of God on the intellectual horizon of contemporary science From Einstein Planck and Heisenberg to Margenau Hawking and Eccles some of the most penetrating modern minds have needed God in order to make sense of the cosmos

Cosmos and Theos Errol E. Harris, 1992 In *Cosmos and Theos* Professor Errol E Harris develops the theological ethical and social implications of the Anthropic Cosmological Principle He argues that the twentieth century revolution in physics reinstates the traditional arguments for the existence of God that had been inevitably invalidated by the logic appropriate to Empiricism and the presuppositions of Newtonian science Errol E Harris stresses that the holism of contemporary science now demands a new dialectical logic and metaphysic in the light of which old doctrines assume a new aspect and gain fresh vitality Professor Harris reviews the history of religion in relation to contemporary developments in science contending that the conflict between the two persistent since the seventeenth century is largely the effect of the Copernican Newtonian scientific paradigm rather than of any insuperable divergence of aim or dogma He also reviews the salient arguments and the criticism of them that have been offered in the history of Western philosophy for God's existence *Cosmos and Theos* concludes with a reinterpretation of Christian doctrine intended to demonstrate the essential congruity between its tenets and the current conceptions of the Anthropic Principle
