

# Magnetism in Amorphous Solids

J. M. D. Coey

This chapter aims at providing an overview of collective magnetism in noncrystalline solids. It is descriptive in outlook, and sets out to relate some of the key ideas of amorphous magnetism to well-established concepts of magnetism in crystalline solids, stressing the points where something new emerges because of the lack of a crystal lattice. For example, there are many amorphous ferromagnets yet no amorphous antiferromagnets are known to exist. Why not? In the area of amorphous and disordered solids, magnetism continues to play its traditional role of introducing concepts and posing problems that can be formalized in terms of simplified yet not completely unrealistic models, whose usefulness extends far beyond explaining the magnetic properties of solids. Past examples of this sort have been in the areas of phase transitions, elementary excitations, two-level systems, and physics in one or two dimensions. Another important facet is the practical potential of amorphous magnets that provides a ready justification for working in the field. The scope for applications of these materials will be discussed briefly. However, the bulk of the chapter is devoted to a discussion of magnetic order in amorphous solids, and the influence of a nonperiodic lattice on its ingredients. Beside the magnetic ground states themselves, topics of interest are defects, excitations, and the manner in which the magnetically ordered state breaks up with increasing temperature. For a more detailed discussion and bibliography on the subjects raised here, the reader is referred to recent monographs and review articles.<sup>(1-6)</sup>

Levy, 2012-12-06 The papers making up this volume represent a summary of the proceedings of the Second International Symposium on Amorphous Magnetism held at Rensselaer Polytechnic Institute on August 25 27 1976 As a result of the resounding success of the International Symposium on Amorphous Magnetism held at Wayne State University on August 17 and 18 1972 this symposium was again organized with the purpose in mind of providing a forum for discussion of the most recent theoretical and experimental advances made in the fields of spin glass systems amorphous magnetic alloys and magnetic oxide glasses The symposium was sponsored by the American Physical Society and supported by a grant from GTE Laboratories Additional support funds were provided by General Electric Allied Chemical and Ford Motor Company The program committee consisted of J J Becker General Electric P A Casabella RPI P J Cote Watervliet Arsenal A M de Graaf Wayne State University R Hasegawa Co Chairman Allied Chemical H O Hooper University of Maine H B Huntington RPI R A Levy Chairman RPI R K MacCrone RPI L N Mulay Penn State University G L Salinger RPI and J Wong General Electric The program of the symposium included 7 invited review papers 53 contributed papers and 10 additional papers read by title because of time limitations The editors wish to extend their deep appreciation to J J Becker A M de Graaf P Duwez J Gustafson D L Huber U

**Amorphous Magnetism** Takahito Kaneyoshi, 2018-01-18 This book presents some of the methods used in the theory of amorphous magnetism from a single standpoint that amorphous magnets have a topologically disordered structure of the type given by the dense random packing of hard spheres The primary aim is to show systematically the present theoretical apparatus in a form which would allow the reader to use it in investigations of still unsolved problems Even within these limits the theory of amorphous magnetism is now a very large subject This book is not designed to review all the developments in this rapidly developing area It is primarily intended for the novice in this field rather than the specialist

**Amorphous Magnetism** H. Hooper, 2012-12-06 The title of amorphous magnetism was conceived to encompass the study of the magnetic properties of dilute random substitutional alloys amorphous metallic alloys amorphous magnetic semiconductors and the conventional glasses including chalcogenide organic and inorganic glasses These materials have heretofore been considered to be quite

different because of the differences in their atomic structures. However, when the magnetic behavior of these materials is carefully examined, it becomes clear that these materials exhibit certain similarities. For the first time at the International Symposium on Amorphous Magnetism held at Wayne State University in Detroit, Michigan, on August 17 and 18, 1972, scientists working in these areas were assembled to examine the similarities of these systems. This volume contains a summary of the 9 invited talks, 23 delivered contributed papers, and an additional 12 contributed papers which were not presented because of insufficient time in the program. This volume presents for the first time a collection of the most current theoretical and experimental studies in the area of amorphous magnetism. We wish to thank the authors of these papers for their outstanding cooperation in preparing their manuscripts and for editing our transcriptions from tape recordings of the discussions which followed their presentations. In addition, we wish to thank the participants at this conference whose enthusiasm and interest made the conference so successful.

*Introduction to Amorphous Magnets* Takahito Kaneyoshi, 1992. This is an introductory textbook on amorphous magnets for students and scientists in physics and materials science. Basic physical arguments are given and experimental data are systematically collected and discussed. The book deals mostly with the qualitative and semiquantitative aspects of materials that can be deduced in a relatively simple way from the fundamental equations of solid state physics.
