In addition, fundamentals of plasma processes and technology are also of critical importance in many semiconductor processing operations such as etching and treatment of polymers, deposition of low dielectric constant materials, and dry photoresist. The understanding of plasma polymer deposition in various technical fields as well as in the treatment methods of polymers have become critical. This book focuses on the deposition, modification, and characterization of polymeric materials which are important for advanced technologies. Particular emphasis is placed on materials and synthesis concepts. Topics include plasma processes for biomaterials, fundamentals of plasma processing, plasma processing for electronics and optics, and plasma treatments and functional coatings.
