Conservation Of Buildings:

Conservation of Buildings John Harvey, 1972 *Conservation of Historic Buildings* Bernard Feilden, 2007-06-07 Since its publication in 1982 Sir Bernard Feilden's *Conservation of Historic Buildings* has become the standard text for architects and others involved in the conservation of historic structures. Leading practitioners around the world have praised the book as being the most significant single volume on the subject to be published. This third edition revises and updates a classic book including completely new sections on conservation of Modern Movement buildings and non-destructive investigation. The result of the lifetime's experience of one of the world's leading architectural conservators, the book comprehensively surveys the fundamental principles of conservation in their application to historic buildings and provides the basic information needed by architects, engineers, and surveyors for the solution of problems of architectural conservation in almost every climatic region of the world. This edition is organized into three complementary parts: in the first, the structure of buildings is dealt with in detail; the second focuses attention on the causes of decay and the materials they affect; and the third considers the practical role of the architect involved in conservation and rehabilitation. As well as being essential reading for architects and others concerned with conservation, many lay people with various kinds of responsibility for historic buildings will find this clearly written, jargon-free work a fruitful source of guidance and information. **Time Honored** John H. Stubbs, 2009-01-14 The absence heretofore of a comparably thoroughgoing but accessible resource on a topic of such urgent public concern was a glaring lapse that makes this deeply researched, lucidly written, and helpfully annotated book an invaluable addition to the literature. *New York Review of Books*. **Time Honored** is a comprehensive survey of the practice, theory, and structure of architectural heritage conservation throughout the world. Offering an argument for why architectural conservation is indispensable to modern life, **Time Honored** describes its parameters and evolution in an historical context and then methodically presents approaches used in various countries, showing how historic preservation in the West differs from conservation in the rest of the world. Illustrated throughout with over 300 photographs, drawings, maps, and charts. No other book navigates the global conservation programs, policies, and project types so completely. **Maintaining and Repairing Old and Historic Buildings** John J. Cullinane, 2012-10-11 A practical guide to the maintenance and repair of old and historic buildings. Carrying out work in accordance with the U.S. Secretary of the Interior's standards and guidelines can be a challenge for professionals charged with the preservation, restoration, and care of historic properties. This book, with CD package, facilitates the process with more than 400 field guidelines for the treatment of historic building structures, systems, and materials. It includes: Background and rationale for treatment; Annotated standards and guidelines; Step-by-step treatment instructions; Information on energy conservation and meeting LEED and ADA requirements. The treatment guidelines cover a wide range of issues, from how to replace broken glass in wood and metal windows to preparing historic mortar. Each guideline can be printed out individually from the accompanying CD for easy reference and on-site use. Well organized and

easy to use Maintaining and Repairing Old and Historic Buildings is a valuable resource for architects engineers facility managers and related professionals working in the areas of building preservation and restoration Historic Construction and Conservation Pere Roca, Paulo B. Lourenço, Angelo Gaetani, 2019-07-03 Conservation in the built environment raises fundamental questions which have been debated for centuries what is worth preserving how is it possible why is it important This book takes a modern approach to the meaning of a heritage structure and its conservation The historical evolution of conservation is briefly addressed considering prominent individuals and cases along with the history of construction focusing on materials and related structural elements with insight on the sizing rules adopted by masons This explains structural decisions made during the construction process and allows comparison of scientific theories from the 18th century to modern understanding of limit analysis Damage and collapse mechanisms for masonry construction as the most widespread structural form for historical buildings is described Excess permanent loading and settlement is differentiated from environmental and anthropogenic actions such as earthquake or incorrect intervention The team of authors brings together unique expertise with high level research and leading practice with archetypical cases from around the world The book addresses the history of conservation by exploring materials and structures and the history of construction and damage so it is of value to students and professionals in civil engineering and architecture as well as archaeologists and art historians

Conservation of Historic Buildings Bernard Melchior Feilden, 1993 **Building Conservation Philosophy** John Earl, Andrew Saint, 2015-12-08 This is a book about ideas rather than techniques Public thirst for visible evidence of the past is not as it is often represented a recent phenomenon It was already well developed when an overseer of ancient monuments was appointed in sixth century Rome But if the desire to preserve aspects of the past is to do more than respond to popular whims and fashions or represent the personal views of ivory towered scholars and specialists it needs to have some kind of solid logical basis Philosophical questions are raised at every turn On what basis can buildings be singled out as historic buildings demanding special protection On what authority can we justify interfering with private property rights in pursuing such protective processes And how should we judge what is acceptable and unacceptable in the treatment of the buildings we value In this third substantially revised edition the author examines the nature of monuments and the varied motives for preserving them He traces the history of movements to preserve old buildings and the furious conflicts that have frequently surrounded restoration campaigns Philosophical problems arising in modern conservation practice including such controversial issues as skin deep preservation and the use of substitute materials are considered in detail More space is devoted in this edition to contextual issues New sections deal with issues of sustainability and the relationship of buildings to the townscape and landscape The number of illustrations has also been greatly increased The book is designed especially for students approaching the subject for the first time but may well be found stimulating by practitioners No easy formulae are offered What conservators have to nurture the author insists is an inquiring and self critical frame of mind enabling them to

proceed from comprehensive knowledge of the buildings for the time being in their care via logical argument to defensible if not inevitable solutions
