Conservation Of Nature:

International Organization and the Conservation of Nature Robert Boardman,1981-06-18 **Conservation Science: Balancing the Needs of People and Nature** Peter Kareiva,Michelle Marvier,2024-07-25 Focused on protecting nature and the planet Conservation Science Balancing the Needs of People and Nature contains a heavy emphasis on highlighting strategies to better connect the practice of conservation with the needs and priorities of a growing human population to give you an overview of this important area of science **Why Conserve Nature?** Stephen Trudgill,2022-02-24 How we view nature transforms the world around us People rehearse stories about nature which make sense to them If we ask the question why conserve nature and the answers are based on myths then are these good myths to have Scientific knowledge about the environment is fundamental to ideas about how nature works It is essential to the conservation endeavour However any conservation motivation is nested within a society s meanings of nature and the way society values it Given the therapeutic and psychological significance of nature for us and our culture this book considers the meanings derived from the poetic and emotional attachment to a sense of place which is arguably just as important as scientific evidence The functional significance of species is important but so too is the therapeutic value of nature together with the historic and spiritual meanings entwined in a human feeling for landscape and wildlife **Conservation of Living Nature and Resources** Alexey V. Yablokov,Sergey A. Ostroumov,2013-06-29 This book is based on our two books published in the USSR and translated in a number of other countries Conservation of living nature problems and perspectives 1983 and The levels of conservation of living nature 1985 It differs from the vast majority of the numerous books on conservation and environment which are mainly devoted either to specific problems of conservation of certain taxons or to problems of conservation of prescribed regions or to general issues of environmental conservation in toto while the problems of the conservation of living nature are represented only to a small degree Our book is one of the volumes at present not numerous that place a high value on the diversity of living nature as the basis for the existence and development of mankind on the Earth Living nature besides its own intrinsic value at all times was is now and will ever remain the sole unique and indispensable resource and provider for mankind *Conservation Biology* Peggy L. Fiedler,2012-12-06 John Harper Nature conservation has changed from an idealistic philosophy to a serious technology Ecology the science that underpins the technology of conservation is still too immature to provide all the wisdom that it must It is arguable that the desire to conserve nature will in itself force the discipline of ecology to identify fundamental problems in its scientific goals and methods In return ecologists may be able to offer some insights that make conservation more practicable Harper 1987 The idea that nature species or communities is worth preserving rests on several fundamental arguments particularly the argument of nostalgia and the argument of human benefit and need Nostalgia of course is a powerful emotion With some notable exceptions there is usually a feeling of dismay at a change in the status quo whether it be the loss of a place in the country

for walking or rambling the loss of a painting or architectural monument or that one will never again have the chance to see a particular species of bird or plant

Leaving Space for Nature Nigel Dudley, Sue Stolton, 2020-03-23 This book provides the first contemporary assessment of area based conservation and its implications for nature and society Now covering 15 per cent of the land surface and a growing area of ocean the creation of protected areas is one of the fastest conscious changes in land management in history But this has come at a cost including a backlash from human rights organisations about the social impacts of protected areas At the same time a range of new types of area based conservation has emerged based on indigenous people s territories local community lands and a new designation of other effective area based conservation measures This book provides a concise overview of the status and possible futures of area based conservation With many people calling for half the earth s land surface to remain in a natural condition this book taps into the urgent debate about the feasibility of such an aim and the ways in which such land might be managed It provides a timely contribution by people who have been at the centre of the debate for the last twenty years Building on the authors large personal knowledge the book draws on global case studies where the authors have firsthand experience including Yosemite National Park USA Blue Mountains National Park Australia Bwindi National Park Uganda Chingaza National Park Colombia Ustyart Plateau Kazakhstan Snowdonia National Park Wales and many more This book is essential reading for students academics and practitioners interested in conservation and its impact on society

Evaluation and Assessment for Conservation Ian Spellerberg, 2013-11-11 Most politicians have jumped on the conservation bandwagon and nobody running for public office these days can afford to take an overtly anti environment stand The fascination that children have for nature the generous donations people make to conservation organizations the votes cast for Green Parties the continuing popularity of zoos and wildlife films and the strong sales of books about the environment all provide evidence to politicians that the general public supports the idea of conservation Conservation has become a major issue for governments No longer is it necessary for conservationists to campaign for getting the cause on the agenda it is already there at least as a talking point The issue now is how to convert this generalized interest into real action And among the many priorities competing for attention how is a govern ment or a private organization to decide wh at to do first From a very limited budget for budgets will always be limited what is the package of activities that is most likely to lead to the results that the public wants Ian Spellerberg attempts to address these questions

which are at the heart of modern conservation action It is relatively easy to prescribe useful activities that will benefit both the environment and the public at large

Against Extinction William (Bill) Adams, 2013-06-17 Conservation in the 21st century needs to be different and this book is a good indicator of why Bulletin of British Ecological Society Against Extinction tells the history of wildlife conservation from its roots in the 19th century through the foundation of the Society for the Preservation of the Wild Fauna of the Empire in London in 1903 to the huge and diverse international movement of the present day It vividly portrays conservation's legacy of big game hunting the battles for the establishment of national parks the global importance of species conservation and debates over the sustainable use of and trade in wildlife Bill Adams addresses the big questions and ideas that have driven conservation for the last 100 years How can the diversity of life be maintained as human demands on the Earth expand seemingly without limit How can preservation be reconciled with human rights and the development needs of the poor Is conservation something that can be imposed by a knowledgeable elite or is it something that should emerge naturally from people's free choices These have never been easy questions and they are as important in the 21st century as at any time in the past The author takes us on a lively historical journey in search of the answers

The Conservation Revolution Bram Buscher,Robert Fletcher,2020-02-11 A post capitalist manifesto for conservation Conservation needs a revolution This is the only way it can contribute to the drastic transformations needed to come to a truly sustainable model of development The good news is that conservation is ready for revolution Heated debates about the rise of the Anthropocene and the current sixth extinction crisis demonstrate an urgent need and desire to move beyond mainstream approaches Yet the conservation community is deeply divided over where to go from here Some want to place half earth into protected areas Others want to move away from parks to focus on unexpected and new natures Many believe conservation requires full integration into capitalist production processes Building a razor sharp critique of current conservation proposals and their contradictions B scher and Fletcher argue that the Anthropocene challenge demands something bigger better and bolder Something truly revolutionary They propose convivial conservation as the way forward This approach goes beyond protected areas and faith in markets to incorporate the needs of humans and nonhumans within integrated and just landscapes Theoretically astute and practically relevant The Conservation Revolution offers a manifesto for conservation in the twenty first century a clarion call that cannot be ignored
