Conserving Wildlife:

Conserving Wildlife Diversity Canada. Environment Canada, 1998 In 1992 Canada became the first industrialized country to ratify the United Nations Convention on Biological Diversity which came into force on December 29 1993 United Nations Environmental Program 1994 The Convention recognizes that biological diversity is an important asset to current and future generations affirms that conserving biodiversity is a common concern of mankind and notes that it is vital to anticipate prevent and attack the causes of biodiversity loss at their source

Introductory **The Economics of Conserving Wildlife and Natural Areas** Clement Allan Tisdell, 2002 This coherent collection of both previously published and specially written papers applies general economic principles to the conservation of wildlife and natural areas and outlines consequential policy issues Particular consideration is given to open access situations property rights in wildlife and to the total valuation of species allowing for their possible positive and negative values Possible conflict between economic growth and biodiversity conservation is discussed as are the arguments for state provision of parks and protected areas Asian elephants kangaroos and whales are selected examples of species used to illustrate applications of the underlying principles Forestry management is also reviewed drawing upon the experiences of China and India Clem Tisdell aims to demonstrate how economics can help to clarify and resolve social conflicts about nature conservation while also highlighting the limits of economics in providing answers such as those of an intrinsic value Doubts are thrown upon some widely accepted concepts such as the Environmental Kuznets curve when applied to the relationship between nature conservation and economic growth The Economics of Conserving Wildlife and Natural Areas will be warmly welcomed by academics and policymakers in the areas of ecological and environmental economics as well as natural resource economists and managers and those with a linked interest to development studies

Conserving Wildlife in India S. K. Chadha, 1992 *Conserving Wildlife in African Landscapes* Nicholas Georgiadis, 2011 During the last two decades conservation strategies in Africa have changed from an almost exclusive focus on large mammals in protected areas to an emphasis on conserving ecological processes at the level of entire landscapes and on the role of human communities The papers assembled in this volume address diverse aspects of conserving the Ewaso landscape in northern Kenya where concerted and prodigious efforts to conserve wildlife and natural resources have achieved substantial progress Topics range from interpreting evidence for continuity and change in patterns of human settlement in the region to describing ecological interactions between wildlife people and livestock that are harmful or helpful from the challenges of adapting livestock management in the presence of predators to legal mechanisms for conserving wildlife habitat on private land In the final chapter results of a strategic planning exercise are described for conserving essential elements in the entire landscape the first of its kind in Kenya Today national policy and political will are still insufficiently aligned with this landscape conservation imperative to effect the changes that are necessary to conserve Kenya's biodiversity We hope this volume will help propagate awareness about the importance and threatened status of

Mahoney, Valerius Geist, 2019-09-10 The foremost experts on the North American Model of Wildlife Conservation come together to discuss its role in the rescue recovery and future of our wildlife resources At the end of the nineteenth century North America suffered a catastrophic loss of wildlife driven by unbridled resource extraction market hunting and unrelenting subsistence killing This crisis led powerful political forces in the United States and Canada to collaborate in the hopes of reversing the process not merely halting the extinctions but returning wildlife to abundance While there was great understanding of how to manage wildlife in Europe where wildlife management was an old mature profession Continental methods depended on social values often unacceptable to North Americans Even Canada a loyal colony of England abandoned wildlife management as practiced in the mother country and joined forces with like minded Americans to develop a revolutionary system of wildlife conservation In time and surviving the close scrutiny and hard ongoing debate of open democratic societies this series of conservation practices became known as the North American Model of Wildlife Conservation In this book editors Shane P Mahoney and Valerius Geist both leading authorities on the North American Model bring together their expert colleagues to provide a comprehensive overview of the origins achievements and shortcomings of this highly successful conservation approach This volume reviews the emergence of conservation in late nineteenth early twentieth century North America provides detailed explorations of the Model's institutions principles laws and policies places

the Model within ecological cultural and socioeconomic contexts describes the many economic social and cultural benefits of wildlife restoration and management addresses the Model s challenges and limitations while pointing to emerging opportunities for increasing inclusivity and optimizing implementation Studying the North American experience offers insight into how institutionalizing policies and laws while incentivizing citizen engagement can result in a resilient framework for conservation Written for wildlife professionals researchers and students this book explores the factors that helped fashion an enduring conservation system one that has not only rescued recovered and sustainably utilized wildlife for over a century but that has also advanced a significant economic driver and a greater scientific understanding of wildlife ecology Contributors Leonard A Brennan Rosie Cooney James L Cummins Kathryn Frens Valerius Geist James R Heffelfinger David G Hewitt Paul R Krausman Shane P Mahoney John F Organ James Peek William Porter John Sandlos James A Schaefer [Saving Species on Private Lands](#) Lowell E.
