A  
Sociological  
History of  
Particle  
Physics

*Constructing Quarks* is a history of the post-war conceptual development of elementary-particle physics. It aims to interpret the formulation and elaboration of scientific knowledge in terms of what scientists actually do – the day-to-day practice of the scientific community. At the heart of the account is an image of the scientist as an active manipulator of his culture, who deploys his own special expertise in a research practice addressed to, and drawing upon, that of his colleagues.

The book invites a reappraisal of the status of scientific knowledge. It suggests that scientists are not passive observers and reporters of nature, but active constructors of the world of natural phenomena through a social symbiosis of experimental and theoretical practice.
