Course In Metric Geometry:

A Course in Metric Geometry Dmitri Burago, Iñaki Dmitrievich Burago, Sergeĭ Ivanov, 2001 Metric geometry is an approach to geometry based on the notion of length on a topological space This approach experienced a very fast development in the last few decades and penetrated into many other mathematical disciplines such as group theory dynamical systems and partial differential equations The objective of this graduate textbook is twofold to give a detailed exposition of basic notions and techniques used in the theory of length spaces and more generally to offer an elementary introduction into a broad variety of geometrical topics related to the notion of distance including Riemannian and Carnot Caratheodory metrics the hyperbolic plane distance volume inequalities asymptotic geometry large scale coarse Gromov hyperbolic spaces convergence of metric spaces and Alexandrov spaces non positively and non negatively curved spaces The authors tend to work with easy to touch mathematical objects using easy to visualize methods The authors set a challenging goal of making the core parts of the book accessible to first year graduate students Most new concepts and methods are introduced and illustrated using simplest cases and avoiding technicalities The book contains many exercises which form a vital part of exposition
