Constructibility And Mathematical Existence

Scott C. Dulebohn

Constructibility And Mathematical Existence:

Constructibility and Mathematical Existence Charles S. Chihara,1990 Concerned with the problem of existence in mathematics this volume develops a mathematical system in which there are no existence assertions but only assertions of constructibility It explores the philosophical implications of such an approach in the writings of Field Burgess Maddy and Kitcher *Constructibility and Mathematical Existence: The Constructibility Theory* - 1. *The Problem of Existence in Mathematics* - 2. *The Constructibility Quantifiers* - 3. *Constructibility and Open Sentences* - 4. *The Deductive System* - 5. *Cardinality and Number Theory* - 6. *Measurable Quantities and Analysis - Part II: Philosophical Developments* - 7. *Mathematical Structuralism* - 8. *Science Without Numbers* - 9. *Why Burgess Is a Moderate Realist* - 10. *Maddy's Solution to the Problem of Reference* - 10. *Kitcher's Ideal Agent* - 12. *Deflationism and Mathematical Truth* Charles S. Chihara,1990

The Oxford Handbook of Philosophy of Mathematics and Logic Stewart Shapiro,2005-02-10 Mathematics and logic have been central topics of concern since the dawn of philosophy Since logic is the study of correct reasoning it is a fundamental branch of epistemology and a priority in any philosophical system Philosophers have focused on mathematics as a case study for general philosophical issues and for its role in overall knowledge gathering Today philosophy of mathematics and logic remain central disciplines in contemporary philosophy as evidenced by the regular appearance of articles on these topics in the best mainstream philosophical journals in fact the last decade has seen an explosion of scholarly work in these areas This volume covers these disciplines in a comprehensive and accessible manner giving the reader an overview of the major problems positions and battle lines The 26 contributed chapters are by established experts in the field and their articles contain both exposition and criticism as well as substantial development of their own positions The essays which are substantially self contained serve both to introduce the reader to the subject and to engage in it at its frontiers Certain major positions are represented by two chapters one supportive and one critical The Oxford Handbook of Philosophy of Math and Logic is a ground breaking reference like no other in its field It is a central resource to those wishing to learn about the philosophy of mathematics and the philosophy of logic or some aspect thereof and to those who actively engage in the discipline from advanced undergraduates to professional philosophers mathematicians and historians **A Structural**

Account of Mathematics Charles S. Chihara,2004 Charles Chihara s new book develops and defends a structural view of the nature of mathematics and uses it to explain a number of striking features of mathematics that have puzzled philosophers for centuries The view is used to show that in order to understand how mathematical systems are applied in science and everyday life it is not necessary to assume that its theorems either presuppose mathematical objects or are even true Chihara builds upon his previous work in which he presented a new system of mathematics the constructibility theory which did not make reference to or presuppose mathematical objects Now he develops the project further by analysing mathematical systems currently used by scientists to show how such systems are compatible with this nominalistic outlook He advances

several new ways of undermining the heavily discussed indispensability argument for the existence of mathematical objects made famous by Willard Quine and Hilary Putnam And Chihara presents a rationale for the nominalistic outlook that is quite different from those generally put forward which he maintains have led to serious misunderstandings A Structural Account of Mathematics will be required reading for anyone working in this field [Structuralism and Mathematical Existence](#) Timothy Garrick Murphy,2007 [God and Abstract Objects](#) William Lane Craig,2017-09-05 This book is an exploration and defense of the coherence of classical theism s doctrine of divine aseity in the face of the challenge posed by Platonism with respect to abstract objects A synoptic work in analytic philosophy of religion the book engages discussions in philosophy of mathematics philosophy of language metaphysics and metaontology It addresses absolute creationism non Platonic realism fictionalism neutralism and alternative logics and semantics among other topics The book offers a helpful taxonomy of the wide range of options available to the classical theist for dealing with the challenge of Platonism It probes in detail the diverse views on the reality of abstract objects and their compatibility with classical theism It contains a most thorough discussion rooted in careful exegesis of the biblical and patristic basis of the doctrine of divine aseity Finally it challenges the influential Quinean metaontological theses concerning the way in which we make ontological commitments *Mathematics in Philosophy* Charles D. Parsons,2018-08-06 This important book by a major American philosopher brings together eleven essays treating problems in logic and the philosophy of mathematics A common point of view that mathematical thought is central to our thought in general underlies the essays In his introduction Parsons articulates that point of view and relates it to past and recent discussions of the foundations of mathematics Mathematics in Philosophy is divided into three parts Ontology the question of the nature and extent of existence assumptions in mathematics is the subject of Part One and recurs elsewhere Part Two consists of essays on two important historical figures Kant and Frege and one contemporary W V Quine Part Three contains essays on the three interrelated notions of set class and truth *The Journal of Philosophy* ,1929 Covers topics in philosophy psychology and scientific methods Vols 31 include A Bibliography of philosophy 1933 *Oxford Studies in Metaphysics* Dean W. Zimmerman,Karen Bennett,2008 dedicated to the timely publication of new work in metaphysics broadly construed *The Ethics of Geometry* David Rapport Lachterman,1989 In a wide ranging study of the relationship between philosophy and mathematics Lachterman discussing the importance of construction from Euclid to Kant and his successors **International Philosophical Quarterly** ,1961 [For the Learning of Mathematics](#) ,1998 [Philosophy of Mathematics and Deductive Structure in Euclid's Elements](#) Ian Mueller,2006 A survey of Euclid s Elements this text provides an understanding of the classical Greek conception of mathematics and its similarities to modern views as well as its differences It focuses on philosophical foundational and logical questions rather than focusing strictly on historical and mathematical issues and features several helpful appendixes [The Existence of God](#) Stig Børsen Hansen,2010 This study breaks new ground on the question of the existence of God It innovatively combines biblical scholarship with an analysis of

existence drawn from the writings of the philosopher Gottlob Frege It shows that the strength of Frege s approach is its emphasis on the notions of proper name and predicate this in turn sheds new light on important elements of theological language Finally the Fregean approach in this book is defended against objections drawn from readings of Ludwig Wittgenstein s *Tractatus Logico Philosophicus* **Mind** ,1993 Issues for 1896 1900 contain papers of the Aristotelian Society *The Philosophy of Mathematics* Stephan Körner,1960 *The British National Bibliography* Arthur James Wells,1992 *The Field of Consciousness* Aron Gurwitsch,1964 **The Metaphysics of Signs and the Semantics of Quotation** Herman Wright Cappelen,1997 **Proceedings and Addresses of the American Philosophical Association** American Philosophical Association,1992 List of members in v 1
