*Finite Markov Processes and Their Applications* Marius Iosifescu, 2014-07-01 A self contained treatment of finite Markov chains and processes this text covers both theory and applications Author Marius Iosifescu vice president of the Romanian Academy and director of its Center for Mathematical Statistics begins with a review of relevant aspects of probability theory and linear algebra Experienced readers may start with the second chapter a treatment of fundamental concepts of homogeneous finite Markov chain theory that offers examples of applicable models The text advances to studies of two basic types of homogeneous finite Markov chains absorbing and ergodic chains A complete study of the general properties of homogeneous chains follows Succeeding chapters examine the fundamental role of homogeneous infinite Markov chains in mathematical modeling employed in the fields of psychology and genetics the basics of nonhomogeneous finite Markov chain theory and a study of Markovian dependence in continuous time which constitutes an elementary introduction to the study of continuous parameter stochastic processes Algebraic Monoids, Group Embeddings, and Algebraic Combinatorics Mahir Can, Zhenheng Li, Benjamin Steinberg, Qiang Wang, 2014-06-11 This book contains a collection of fifteen articles and is dedicated to the sixtieth birthdays of Lex Renner and Mohan Putcha the pioneers of the field of algebraic monoids Topics presented include structure and representation theory of reductive algebraic monoids monoid schemes and applications of monoids monoids related to Lie theory equivariant embeddings of algebraic groups constructions and properties of monoids from algebraic combinatorics endomorphism monoids induced from vector bundles Hodge Newton decompositions of reductive monoids A portion of these articles are designed to serve as a self contained introduction to these topics while the remaining contributions are research articles containing previously unpublished results which are sure to become very influential for future work Among these for example the important recent work of Michel Brion and Lex Renner showing that the algebraic semi groups are strongly regular Graduate students as well as researchers working in the fields of algebraic semi group theory algebraic combinatorics and the theory of algebraic group embeddings will benefit from this unique and broad compilation of some fundamental results in semi group theory algebraic group embeddings and algebraic combinatorics merged under the umbrella of algebraic monoids **Chaînes de Markov sur les permutations** Gérard Letac, 1978 *Stochastic Analysis of Computer Storage* O.I. sophistication of mathematics applied in various sciences has changed drastically in recent years measure theory is used non trivially in regional and theoretical economics algebraic geometry interacts with physics the Minkowsky lemma coding theory and the structure of water meet one another in packing and covering theory quantum fields crystal defects and mathematical programming profit from homotopy theory Lie algebras are relevant to filtering and prediction and electrical engineering can use Stein spaces And in addition to this there are such new emerging subdisciplines as experimental mathematics CFD completely integrable systems chaos synergetics and large scale order which are almost impossible to fit into the existing classification schemes They draw upon widely different sections of mathematics

*Harmonic Analysis of Wreath Products of Finite Groups* Tullio Ceccherini-Silberstein,Fabio Scarabotti,Filippo

Tolli,2014-01-16 This book presents an introduction to the representation theory of wreath products of finite groups and harmonic analysis on the corresponding homogeneous spaces The reader will find a detailed description of the theory of induced representations and Clifford theory focusing on a general formulation of the little group method This provides essential tools for the determination of all irreducible representations of wreath products of finite groups The exposition also includes a detailed harmonic analysis of the finite lamplighter groups the hyperoctahedral groups and the wreath product of two symmetric groups This relies on the generalised Johnson scheme a new construction of finite Gelfand pairs The exposition is completely self contained and accessible to anyone with a basic knowledge of representation theory Plenty of worked examples and several exercises are provided making this volume an ideal textbook for graduate students It also represents a useful reference for more experienced researchers
