Challenges To Nuclear Waste:

Challenges of Nuclear Waste Governance Achim Brunnengräber, Maria Rosaria Di Nucci, Ana María Isidoro Losada, Lutz Mez, Miranda A. Schreurs, 2018-03-17 This is volume two of a comparative analysis of nuclear waste governance and public participation in decision making regarding the storage and siting of high level radioactive waste and spent fuel in different countries The contributors examine both the historical and current approaches countries have taken to address the wicked challenge of nuclear waste governance The analyses discuss the regulations technology choices safety criteria costs and financing issues compensation schemes institutional structures and approaches to public participation found in each country

Disposition of High-Level Waste and Spent Nuclear Fuel National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Disposition of High-Level Radioactive Waste Through Geological Isolation, 2001-06-05 Focused attention by world leaders is needed to address the substantial challenges posed by disposal of spent nuclear fuel from reactors and high level radioactive waste from processing such fuel The biggest challenges in achieving safe and secure storage and permanent waste disposal are societal although technical challenges remain Disposition of radioactive wastes in a deep geological repository is a sound approach as long as it progresses through a stepwise decision making process that takes advantage of technical advances public participation and international cooperation Written for concerned citizens as well as policymakers this book was sponsored by the U S Department of Energy U S Nuclear Regulatory Commission and waste management organizations in eight other countries

Problems and Prospects for Nuclear Waste Disposal Policy Eric B. Herzik, Alvin H. Mushkatel, 1993-11-30 The development and use of nuclear power in the United States has become stalemated After the early promise of energy too cheap to meter public concerns and legal challenges have stymied the nuclear power industry Chief among these is the issue of safe disposal of nuclear waste This volume therefore examines the dynamics of nuclear waste disposal policy It is organized to address a wide range of issues found in the policy debate e g the interrelationship between science and public choice policy management and implementation legal protection and liability quality assurance and transportation and so on The volume provides a comprehensive view of the complex environment in which nuclear waste disposal policy develops

The Environmental Challenges of Nuclear Disarmament Thomas E. Baca, Tadeusz Florkowski, 2012-12-06 The end of the Cold War marked the beginning of a new era of facing the legacy of the arms race The enormous challenge confronting us now is to strengthen the fragile nature of the new political balance The beginning of this new historical period is characterized by mistrust and the best way to ease these tensions is through international collaborations Moreover the intimate nature of close non invasive collaborative work on environmental problems can help establish a secure foundation of mutual understanding and trust Environmental projects are non threatening to national security issues and may involve collaborations throughout the international weapons complex Personal and individual scientific relationships quite often spearhead agreements at the

government to government level Environmental and nonproliferation issues are of great importance to the citizens of Russia to the states of the Former Soviet Union and to neighboring countries The activities associated with decontamination and decommissioning of old facilities environmental restoration security enhancements monitoring and surveillance and risk reduction should provide a significant employment potential for scientists and engineers of the weapons complex of the Former Soviet Union

Nuclear Waste Piero Risoluti, 2013-06-29 Foreword Over the past decades Piero Risoluti has built up an intimate knowledge of the nuclear industry in particular of nuclear waste management In this book his scientific understanding is apparent for example in his comprehensive but readily understandable descriptions of waste conditioning and disposal Moreover he has also been directly involved in the wider societal and political debates in the nuclear area especially in his Italian homeland What shines through in these pages is his frustration at the lack of progress in implementing disposal concepts that are judged by many to be very safe and his unfaltering drive to improve this situation To provoke debate the book is very deliberately written in a polarising black and white style that can easily be labelled as politically incorrect a characterisation that Piero will probably agree with and be amused by Criticism is directed equally at loud mouthed and incompetent anti nuclear environmentalists the nuclear Byzantium of the international nuclear establishment the intellectual narcissism of those nuclear experts that dare to admit the importance of societal issues and the tendency of politicians to in definite procrastination These are not words chosen to avoid open confrontation of opposing views

Nuclear Waste Management Mark Gaffigan, 2010-06 High level nuclear waste one of the nation's most hazardous substances is accumulating at 80 sites in 35 states The waste is supposed to be disposed of in a geologic repository at Yucca Mountain about 100 miles northwest of Las Vegas NV However the repository is more than a decade behind schedule and the nuclear waste generally remains at the commercial nuclear reactor sites and DoE sites where it was generated This report examines the key attributes challenges and costs of the Yucca Mountain repository and the two principal alternatives to a repository that nuclear waste management experts identified storing the nuclear waste at two centralized locations and continuing to store the waste on site where it was generated III

Nuclear Waste Mark Gaffigan, 2011-04-07 Statement of Mark Gaffigan Mng Dir Natural Resources and Environment GAO The U S has generated over 75 000 metric tons of spent nuclear fuel and high level nuclear waste extremely hazardous substances at 80 sites in 35 states and is expected to more than double that amount by 2055 The Nuclear Waste Policy Act of 1982 NWPA required the Dept of Energy DOE to investigate a geologic repository for nuclear waste In 1987 Congress amended NWPA to direct DOE to focus on a repository at Yucca Mountain NV In 2008 DOE submitted a license application for the repository but in March 2010 moved to withdraw it However the Nuclear Regulatory Comm NRC or the courts as a result of federal lawsuits might compel DOE to resume the licensing process GAO has reported on options for interim storage of this waste and the effects a Yucca Mountain termination could have on both commercial waste and DOE managed waste This testimony is based on that prior work and discusses 1

the status of the Yucca Mountain repository and national policy for nuclear waste disposal 2 options for storing nuclear waste and their benefits and challenges and 3 principal lessons that can be learned from past nuclear waste management efforts Figures This is a print on demand report Nuclear Waste Disposal Warren S. Melfort,2003 The disposal of nuclear waste is becoming a major concern Many nuclear power plants around the world are nearing the end of their operating lives This is particularly true in the United States where most nuclear power plants are approaching the end of the operational time period allowed in their licenses The disposal of radioactive waste from nuclear power plants and nuclear missiles is as politically intense an issue as the plants and missiles themselves Yet the three issues have remained curiously separate in spite of their close physical ties Few debates on nuclear power or nuclear weapons discuss the problems of waste disposal should the power plant or missile be decommissioned Few debates on nuclear waste disposal discuss the opportunities to close nuclear power plants or get rid of nuclear weapons a disposal site would afford Nuclear waste can be generally classified either low level radioactive waste or high level radioactive waste Low level nuclear waste usually includes material used to handle the highly radioactive parts of nuclear reactors i e cooling water pipes and radiation suits and waste from medical procedures involving radioactive treatments or x rays Low level waste is comparatively easy to dispose of The level of radioactivity and the half life of the radioactive isotopes in low level waste is relatively small Storing the waste for a period of 10 to 50 years will allow most of the radioactive isotopes in low level waste to decay at which point the waste can be disposed of as normal refuse High level radioactive waste is generally material from the core of the nuclear reactor or nuclear weapon This waste includes uranium plutonium and other highly radioactive elements made during fission Most of the radioactive isotopes in high level waste emit large amounts of radiation and have extremely long half lives some longer than 100 000 years creating long time periods before the waste will settle to safe levels of radioactivity This new book explores the issues pertaining either directly or indirectly to nuclear waste disposal Nuclear Waste Governance Achim Brunnengräber, Maria Rosaria Di Nucci, Ana Maria Isidoro Losada, Lutz Mez, Miranda A. Schreurs, 2015-03-02 This volume examines the national plans that ten Euratom countries plus Switzerland and the United States are developing to address high level radioactive waste storage and disposal The chapters which were written by 23 international experts outline European and national regulations technology choices safety criteria monitoring systems compensation schemes institutional structures and approaches to public involvement Key stakeholders their values and interests are introduced the responsibilities and authority of different actors considered decision making processes are analyzed as well as the factors influencing different national policy choices The views and expectations of different communities regarding participatory decision making and compensation and the steps that have been or are being taken to promote dialogue and constructive problem solving are also considered **Nuclear waste** United States. Conflicts, Participation and Acceptability in Nuclear Waste Governance Achim Brunnengraber,Maria Rosaria Di Nucci,2019-07-12

This book is the last part of a trilogy and concludes a long term project that focussed on nuclear waste governance in 24 countries It deals with core themes of the disposal of high level radioactive waste HLW e g the wicked problems of housing nuclear waste disposal facilities public participation and public discourse voluntarism and compensation in siting as well as the role of advisory bodies and commissions The volume reflects on the diverse factors that shape the debate on what can be considered an acceptable solution and on various strategies adopted in order to minimise conflicts and possibly increase acceptability The various theoretical and empirical contributions shed light on several mechanisms and issues touched upon in these strategies such as the role of trust voluntarism economic interests at stake compensation ethics governance and participation

Decision-making and Radioactive Waste Disposal Andrew Newman,Gerry Nagtzaam,2015-11-19

The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year Vital medical procedures industrial processes and

basic science research also produce significant quantities of waste All of this waste must be shielded from the population for extended periods of time Finding suitable locations for disposal facilities is beset by two main problems community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making Decision making and Radioactive Waste Disposal explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made Five countries are featured the US Australia Spain South Korea and Switzerland This book seeks to establish an understanding of the political economic environmental legal and social dimensions of siting across those countries This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts The book will be of interest to students and scholars of environmental law justice management politics energy and security policy as well as decision makers in government and industry

The Challenges to Nuclear Power in the Twenty-First Century

Behram N. Kursunogamalu, Stephan L. Mintz, Arnold Perlmutter, 2005-12-16 International Energy Forum 1999 was held in Washington D C during November 5 6 1999 in the Hyatt Regency Hotel in Crystal City Once again the main topic was Nuclear Energy Various papers presented contained pros and cons of Nuclear Energy for generating electricity We were aiming to clarify the often discussed subject matter of the virtues of Nuclear Energy with regard to Global Warming as compared to using fossil fuels for the generation of electricity The latter is also currently the only way to operate our means of transportation like automobiles planes etc Therefore emission into the atmosphere of greenhouse gases constitutes the main source of Global Warming which is absent in the case of Nuclear Energy These arguments are often put forward to promote the use of Nuclear Energy However not all is well with the Nuclear Energy There are the questions of the waste problem so far unsolved safety of Nuclear Reactors is not guaranteed to the extent that they are inherently safe If we aim to construct inherently safe reactors then the economics of a Nuclear Reactor makes it unacceptable
