temporary solutions need to be found as for example paraveterinary services The latter should be guaranteed by adequate professional training along the different stages of as an example the food chain production Given the transboundary nature of zoonotic agents and diseases in the last decades the One Health approach has emerged as a new and holistic approach to incorporate the different facets of Veterinary Science To strengthen this approach veterinary training should eventually dedicate more attention to public health and to preventive measures of zoonosis and epidemics This renewed focus will also have the additional benefit of defining more clearly the discipline of VPH Human Public Health with the same philosophy should include the animal ecosphere emerging diseases and zoonoses focusing on the Human Animal Interface **Health**
