Change And Challenge:

Climate Change Challenge: Adaptation to Climate Change Giuseppe Carrus, Chiara Massullo, Lorenza Tiberio, Christoph Steinebach, Lina Fusaro, 2025-10-24 Climate change is globally recognized among the most crucial if not the most crucial emergencies that human societies and the entire planet are facing in current times Accordingly notable efforts are being made at the political scientific and public opinion levels to counter global environmental change and in particular to lower the pace of global warming through a significant reduction of carbon emissions at the global level In this scenario psychological science can contribute not only to understand how human societies can shift from more to less carbon intensive but also to better understand how individuals groups and communities may adapt to ongoing global environmental change in their daily lives The Adaptation to climate change Research Topic involves processes of both assimilation and accommodation In both it serves optimal development under more difficult conditions Adaptation to climate change requires empirical research on the psychological aspects interdisciplinary dialogue with other sciences as well as reflection on the changed self image of psychology as a science and a profession Processes of adaptation can be found e g in the shift of focus from individual and community to environment from concepts and theories to measurement from more general and macro factors to micro factors from general to diverse impact from urban and rural to environmental factors from bouncing back to growth from segmented to an integrative approach Specifically for the Adaptation to Climate Change research topic the Topic Editors welcome themes such as Adaptation of perception General and special conditions of environmental perception Reorientation of education Shaping the social and physical environment to promote positive development Strengthening the sense of responsibility Conditions for environmentally friendly behaviour Realignment of intervention Environment as a specific means of promoting mental health Reshaping the environment Designing the environment to meet sustainable living conditions Any other related themes even if not specifically mentioned here will be welcome as well *The Climate Change Challenge and the Failure of Democracy* David Shearman, Joseph Wayne Smith, 2007-08-30 This provocative book presents compelling evidence that the fundamental problem behind environmental destruction and climate change in particular is the operation of liberal democracy Climate change threatens the future of civilization but humanity is impotent in effecting solutions Even in those nations with a commitment to reduce greenhouse emissions they continue to rise This failure mirrors those in many other spheres that deplete the fish of the sea erode fertile land destroy native forests pollute rivers and streams and utilize the world's natural resources beyond their replacement rate In this provocative book Shearman and Smith present evidence that the fundamental problem causing environmental destruction and climate change in particular is the operation of liberal democracy Its flaws and contradictions bestow upon government and its institutions laws and the markets and corporations that provide its sustenance an inability to make decisions that could provide a sustainable society Having argued that democracy has failed humanity the authors go even further and demonstrate that this failure can easily

lead to authoritarianism without our even noticing Even more provocatively they assert that there is merit in preparing for this eventuality if we want to survive climate change They are not suggesting that existing authoritarian regimes are more successful in mitigating greenhouse emissions for to be successful economically they have adopted the market system with alacrity Nevertheless the authors conclude that an authoritarian form of government is necessary but this will be governance by experts and not by those who seek power There are in existence highly successful authoritarian structures for example in medicine and in corporate empires that are capable of implementing urgent decisions impossible under liberal democracy Society is verging on a philosophical choice between liberty or life But there is a third way between democracy and authoritarianism that the authors leave for the final chapter Having brought the reader to the realization that in order to halt or even slow the disastrous process of climate change we must choose between liberal democracy and a form of authoritarian government by experts the authors offer up a radical reform of democracy that would entail the painful choice of curtailing our worldwide reliance on growth economies along with various legal and fiscal reforms Unpalatable as this choice may be they argue for the adoption of this fundamental reform of democracy over the journey to authoritarianism
