## Changing Agriculture:

**Climate Change and Agriculture** United States. Congress. House. Committee on Agriculture. Subcommittee on Department Operations, Research, and Foreign Agriculture,1990 The Changing Scale of American Agriculture John Fraser Hart,2003 Few Americans know much about contemporary farming which has evolved dramatically over the past few decades In The Changing Scale of American Agriculture the award winning geographer and landscape historian John Fraser Hart describes the transformation of farming from the mid twentieth century when small family farms were still viable to the present when a farm must sell at least 250 000 of farm products each year to provide an acceptable level of living for a family The increased scale of agriculture has outmoded the Jeffersonian ideal of small self sufficient farms In the past farmers kept a variety of livestock and grew several crops but modern family farms have become highly specialized in producing a single type of livestock or one or two crops As farms have become larger and more specialized their number has declined Hart contends that modern family farms need to become integrated into tightly orchestrated food supply chains in order to thrive and these complex new organizations of large scale production require managerial skills of the highest order According to Hart this trend is not only inevitable but it is beneficial because it produces the food American consumers want to buy at prices they can afford Although Hart provides the statistics and clear analysis such a study requires his book focuses on interviews with farmers those who have shifted from mixed crop and livestock farming to cash grain farming in the Midwest agricultural heartland beef dairy chicken egg turkey and hog producers around the periphery of the heartland and specialty crop producers on the East and West Coasts These invaluable case studies bring the reader into direct personal contact with the entrepreneurs who are changing American agriculture Hart believes that modern large scale farmers have been criticized unfairly and The Changing Scale of American Agriculture the result of decades of research is his attempt to tell their side of the story Bibliography of Agriculture ,1962 *Issues in the Impacts of Climate Variability and Change on Agriculture* Linda O. The Changing American Countryside Emery N. Castle, 1995 The literature on rural America to the extent that it exists has largely been written by urban based scholars perpetuating out of date notions and stereotypes or by those who see little difference between rural and agricultural concerns As a result the real rural America remains much misunderstood neglected or ignored by scholars and policymakers alike In response Emery Castle offers *The Changing American Countryside* a volume that will forever change how we look at this important subject Castle brings together the writings of eminent scholars from several disciplines and varying backgrounds to take a fresh and comprehensive look at the forgotten hinterlands These authors examine the role of non metropolitan people and places in the economic life of our nation and cover such diverse issues as poverty industry the environment education family social

problems ethnicity race religion gender government public policy and regional diversity The authors are especially effective in demonstrating why rural America is so much more than just agriculture It is in fact highly diverse complex and interdependent with urban America and the international market place Most major rural problems they contend simply cannot be effectively addressed in isolation from their urban and international connections To do so is misguided and even hazardous when one fourth of our population and ninety seven per cent of our land area is rural Together these writings not only provide a new and more realistic view of rural life and public policy but also suggest how the field of rural studies can greatly enrich our understanding of national life
