Changing Slum Communities Urban Communit:

Slums Alan Mayne, 2017-08-15 More than half of the world's population now lives in urban areas and a billion of these urban dwellers reside in neighborhoods of entrenched disadvantage neighborhoods that are characterized as slums Slums are often seen as a debilitating and even subversive presence within society In reality though it is public policies that are often at fault not the people who live in these neighborhoods In this comprehensive global history Alan Mayne explores the evolution and meaning of the word slum from its origins in London in the early nineteenth century to its use as a slur against the favela communities in the lead up to the Rio Olympics in 2016 Mayne shows how the word slum has been extensively used for two hundred years to condemn and disparage poor communities with the result that these agendas are now indivisible from the word's essence He probes beyond the stereotypes of deviance social disorganization inertia and degraded environments to explore the spatial coherence collective sense of community and effective social organization of poor and marginalized neighborhoods over the last two centuries In mounting a case for the word's elimination from the language of progressive urban social reform *Slums* is a must read book for all those interested in social history and the importance of the world's vibrant and vital neighborhoods

Adapting to Climate Change in Urban Areas, 2007 This paper discusses the possibilities and constraints for adaptation to climate change in urban areas in low and middle income nations These contain a third of the world's population and a large proportion of the people and economic activities most at risk from sea level rise and from the heatwaves storms and floods whose frequency and or intensity climate change is likely to increase Section I outlines both the potentials for adaptation and the constraints Section II discusses the scale of urban change Section III considers direct and indirect impacts of climate change on urban areas and which nations cities and population groups are particularly at risk This highlights how prosperous well governed cities could generally adapt but most of the world's urban population lives in cities or smaller urban centres ill equipped for adaptation A key part of adaptation concerns infrastructure and buildings but much of the urban population in Africa Asia and Latin America lack the infrastructure to adapt Most international agencies have long refused to support urban programmes especially those that address these problems Section IV discusses innovations by urban governments and community organizations and in financial systems that address such problems including the relevance of recent innovations in disaster risk reduction for adaptation It notes how few city and national governments are taking any action on adaptation Section V discusses how local innovation in adaptation can be encouraged and supported at national scale and the funding needed to support this Section VI considers the mechanisms for financing this and the larger ethical challenges that achieving adaptation raises especially the fact that most climate change related urban and rural risks are in low income nations with the least adaptive capacity including many that have contributed very little to greenhouse gas emissions
