Chance Encounters Probability In Education:

Chance Encounters: Probability in Education R. Kapadia, M. Borovcnik, 2012-12-06 This book has been written to fill a substantial gap in the current literature in mathematical education Throughout the world school mathematical curricula have incorporated probability and statistics as new topics There have been many research papers written on specific aspects of teaching presenting novel and unusual approaches to introducing ideas in the classroom however there has been no book giving an overview Here we have decided to focus on probability making reference to inferential statistics where appropriate we have deliberately avoided descriptive statistics as it is a separate area and would have made ideas less coherent and the book excessively long A general lead has been taken from the first book in this series written by the man who probably more than everyone else has established mathematical education as an academic discipline However in his exposition of didactical phenomenology Freudenthal does not analyze probability Thus in this book we show how probability is able to organize the world of chance and idealized chance phenomena based on its development and applications In preparing these chapters we and our co authors have reflected on our own acquisition of probabilistic ideas analyzed textbooks and observed and reflected upon the learning processes involved when children and adults struggle to acquire the relevant concepts Chance Encounters, 1995 Students from grades six and seven conduct experiment with number cube coin and spinner games to investigate such questions as which game gives you a better chance of winning Why does the same game get different results Hands on experience builds an understanding of randomness and probability **Probabilistic Thinking** Egan J. Chernoff, Bharath Sriraman, 2013-12-05 This volume provides a necessary current and extensive analysis of probabilistic thinking from a number of mathematicians mathematics educators and psychologists The work of 58 contributing authors investigating probabilistic thinking across the globe is encapsulated in 6 prefaces 29 chapters and 6 commentaries Ultimately the four main perspectives presented in this volume Mathematics and Philosophy Psychology Stochastics and Mathematics Education are designed to represent probabilistic thinking in a greater context **International Handbook of Mathematics Education** Alan Bishop, M.A. (Ken) Clements, Christine Keitel-Kreidt, Jeremy Kilpatrick, Colette Laborde, 2012-12-06 ALAN J BISHOP Monash University Clayton Victoria Australia RATIONALE Mathematics Education is becoming a well documented field with many books journals and international conferences focusing on a variety of aspects relating to theory research and practice That documentation also reflects the fact that the field has expanded enormously in the last twenty years At the 8th International Congress on Mathematics Education ICME in Seville Spain for example there were 26 specialist Working Groups and 26 specialist Topic Groups as well as a host of other group activities In 1950 the Commission Internationale pour l'Etude et l'Amelioration de l'Enseignement des Mathematiques CIEAEM was formed and twenty years ago another active group the International Group for the Psychology of Mathematics Education PME began at the third ICME at Karlsruhe in 1976 Since then several other specialist groups have been formed and are also active through

regular conferences and publications as documented in Edward Jacobsen's Chapter 34 in this volume Encyclopedia of Mathematics Education Louise Grinstein, Sally I. Lipsey, 2001-03-15 This single volume reference is designed for readers and researchers investigating national and international aspects of mathematics education at the elementary secondary and post secondary levels It contains more than 400 entries arranged alphabetically by headings of greatest pertinence to mathematics education The scope is comprehensive encompassing all major areas of mathematics education including assessment content and instructional procedures curriculum enrichment international comparisons and psychology of learning and instruction *Topics and Trends in Current Statistics Education Research* Gail Burrill, Dani Ben-Zvi, 2018-12-29 This book focuses on international research in statistics education providing a solid understanding of the challenges in learning statistics It presents the teaching and learning of statistics in various contexts including designed settings for young children students in formal schooling tertiary level students and teacher professional development The book describes research on what to teach and platforms for delivering content curriculum strategies on how to teach for deep understanding and includes several chapters on developing conceptual understanding pedagogy and technology teacher knowledge and beliefs and the challenges teachers and students face when they solve statistical problems reasoning and thinking This new research in the field offers critical insights for college instructors classroom teachers curriculum designers researchers in mathematics and statistics education as well as policy makers and newcomers to the field of statistics education Statistics has become one of the key areas of study in the modern world of information and big data The dramatic increase in demand for learning statistics in all disciplines is accompanied by tremendous growth in research in statistics education Increasingly countries are teaching more quantitative reasoning and statistics at lower and lower grade levels within mathematics science and across many content areas Research has revealed the many challenges in helping learners develop statistical literacy reasoning and thinking and new curricula and technology tools show promise in facilitating the achievement of these desired outcomes **Transformation - A Fundamental Idea of Mathematics Education** Sebastian Rezat, Mathias Hattermann, Andrea Peter-Koop, 2013-12-13 The diversity of research domains and theories in the field of mathematics education has been a permanent subject of discussions from the origins of the discipline up to the present On the one hand the diversity is regarded as a resource for rich scientific development on the other hand it gives rise to the often repeated criticism of the discipline's lack of focus and identity As one way of focusing on core issues of the discipline the book seeks to open up a discussion about fundamental ideas in the field of mathematics education that permeate different research domains and perspectives The book addresses transformation as one fundamental idea in mathematics education and examines it from different perspectives Transformations are related to knowledge related to signs and representations of mathematics related to concepts and ideas and related to instruments for the learning of mathematics The book seeks to answer the following questions What do we know about transformations in the different domains What kinds of

transformations are crucial How is transformation in each case conceptualized International Handbook of Research in Statistics Education Dani Ben-Zvi, Katie Makar, Joan Garfield, 2017-12-08 This handbook connects the practice of statistics to the teaching and learning of the subject with contributions from experts in several disciplines Chapters present current challenges and methods of statistics education in the changing world for statistics and mathematics educators Issues addressed include current and future challenges in professional development of teachers use of technology tools design of learning environments and appropriate student assessments This handbook presents challenging and inspiring international research perspectives on the history and nature current issues and future directions of statistics education and statistics education research *Broadening the Scope of Research on Mathematical Problem Solving* Nélia Amado, Susana Carreira, Keith Jones, 2018-11-30 The innovative volume seeks to broaden the scope of research on mathematical problem solving in different educational environments It brings together contributions not only from leading researchers but also highlights collaborations with younger researchers to broadly explore mathematical problem solving across many fields mathematics education psychology of education technology education mathematics popularization and more The volume s three major themes technology creativity and affect represent key issues that are crucially embedded in the activity of problem solving in mathematics teaching and learning both within the school setting and beyond the school Through the book s new pedagogical perspectives on these themes it advances the field of research towards a more comprehensive approach on mathematical problem solving *Broadening the Scope of Research on Mathematical Problem Solving* will prove to be a valuable resource for researchers and teachers interested in mathematical problem solving as well as researchers and teachers interested in technology creativity and affect Proceedings of the ...
