*Changing Reality* Serge Kahili King, 2013-04-01 Reality is experience and experience is reality says Hawaiian shaman Serge King speaking of Huna the esoteric tradition in which he was reared King emphasizes that all of us have the ability to shift from one world to another The difference is that shamans do it purposefully while the rest of us are unaware of it He trains us to engage in the process consciously in order to expand our human potential Among books on Huna this one is unique for offering actual practices for changing our reality to create the life we want In a user friendly conversational style King s chapters explain the four worlds of a shaman and basic Huna principles Then citing case studies he guides us in how to change reality in each of the four worlds bringing in ESP telepathy the perception of auras telekinesis dreaming magical flight and finally soul retrieval and the great power of healing It sounds simple says King and it is The most difficult part is to accept the simplicity because that means changing one s idea about what reality is And that s what this book is all about

*Climate Change Reality* Yves Earhart, 2025-01-08 Climate Change Reality delivers a comprehensive examination of global warming by weaving together scientific evidence policy analysis and actionable solutions for addressing our escalating climate crisis The book uniquely bridges the gap between complex climate science and practical understanding by presenting detailed research from leading institutions like NASA and NOAA in accessible terms while incorporating recently declassified climate data from the 1950s to provide crucial historical context The narrative unfolds across three main sections beginning with a robust foundation of scientific evidence drawn from ice cores satellite observations and atmospheric measurements It then progresses through the evolution of international climate policy showcasing successful initiatives like Scandinavian carbon pricing and Costa Rican reforestation programs The final section outlines concrete actions at governmental corporate and individual levels providing readers with practical frameworks for carbon reduction and sustainable development What sets this book apart is its interdisciplinary approach connecting environmental science with economics public policy and social psychology Through clear data driven analysis and relevant analogies it makes complex climate concepts accessible to a diverse audience ranging from policymakers to concerned citizens The book maintains objectivity while emphasizing the urgency of climate action offering both comprehensive understanding and practical tools for measuring and reducing climate impact at various scales
