**Engineers for Change** Matthew H. Wisnioski, 2012-10-19 An account of conflicts within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history In the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change The engineers were fighting to remake their profession challenging their fellow engineers to embrace a more humane vision of technology In *Engineers for Change* Matthew Wisnioski offers an account of this conflict within engineering linking it to deep seated assumptions about technology and American life The postwar period in America saw a near utopian belief in technology s beneficence Beginning in the mid 1960s however society influenced by the antitechnology writings of such thinkers as Jacques Ellul and Lewis Mumford began to view technology in a more negative light Engineers themselves were seen as conformist organization men propping up the military industrial complex A dissident minority of engineers offered critiques of their profession that appropriated concepts from technology s critics These dissidents were criticized in turn by conservatives who regarded them as countercultural Luddites And yet as Wisnioski shows the radical minority spurred the professional elite to promote a new understanding of technology as a rapidly accelerating force that our institutions are ill equipped to handle The negative consequences of technology spring from its very nature and not from engineering s failures Sociotechnologists were recruited to help society adjust to its technology Wisnioski argues that in responding to the challenges posed by critics within their profession engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history

*Not So Fast* Doug Hill, 2016-10-15 There s a well known story about an older fish who swims by two younger fish and asks How s the water The younger fish are puzzled What s water they ask Many of us today might ask a similar question What s technology Technology defines the world we live in yet we re so immersed in it so encompassed by it that we mostly take it for granted Seldom if ever do we stop to ask what technology is Failing to ask that question we fail to perceive all the ways it might be shaping us Usually when we hear the word technology we automatically think of digital devices and their myriad applications As revolutionary as smartphones online shopping and social networks may seem however they fit into long standing deeply entrenched patterns of technological thought as well as practice Generations of skeptics have questioned how well served we are by those patterns of thought and practice even as generations of enthusiasts have promised that the latest innovations will deliver us soon to Paradise We re not there yet but the cyber utopians of Silicon Valley keep telling us it s right around the corner What is technology and how is it shaping us In search of answers to those crucial questions *Not So Fast* draws on the insights of

dozens of scholars and artists who have thought deeply about the meanings of machines The book explores such dynamics as technological drift technological momentum technological disequilibrium and technological autonomy to help us understand the interconnected interwoven and interdependent phenomena of our technological world In the course of that exploration Doug Hill poses penetrating questions of his own among them Do we have as much control over our machines as we think And who can we rely on to guide the technological forces that will determine the future of the planet *American Studies* Jack Salzman, American Studies Association, 1986-08-29 A major three volume bibliography including an additional supplement of an annotated listing of American Studies monographs published between 1900 and 1988 **Review of the Technology Assessment Act** United States.
