Aphasia In Atypical Populations:

Aphasia in Atypical Populations Patrick Coppens, Yvan Lebrun, Anna Basso, 2012-12-06 Theory and research in aphasiology have typically concentrated on a limited population right handed adult monolinguals whose language uses an alphabetic code Bilingual individuals ideographical code users and children among others have been separated out This book examines the available data from these atypical aphasics asking whether what makes them different has a significant effect on language representation and processing in the brain Each chapter reviews literature pertinent to a given population and explores whether and potentially how these populations differ from the typical aphasic population The ultimate goal is to better understand whether the model of language used in aphasiology can be extended to these atypical populations or conversely whether significant differences merit the development of a new model

Language Processing in Atypical Populations Vivien C. Tartter, 1998-09-25 This up to date presentation of language use and communication skills in atypical populations addresses questions on the essence of language how it is shaped by normal cognitive perceptual and social constraints and how it can be rehabilitated when these constraints are abnormal The author covers the evolutionary continuity of language as seen in communication systems in other species the structure power and processing of signed languages compared with spoken language effect on language learning of language deprivation during childhood because of abuse neglect or deafness developmental abnormalities which have a selective effect on language and communication processes with brain damage or psychosis

The Broca-Wernicke Doctrine Geert-Jan Rutten, 2017-07-04 This book discusses theories that link functions to specific anatomical brain regions The best known of these are the Broca and Wernicke regions and these have become synonyms for the location of productive and receptive language functions respectively This Broca Wernicke model has proved to be such a powerful concept that it remains the predominant view in modern clinical practice What is fascinating however is that there is little evidence for this strictly localist view on language functions Modern neuroscience and numerous clinical observations in individual patients show that language functions are represented in complex and ever changing neural networks It is fair to say that the model is wrong and that Broca's and Wernicke's areas in their classic forms do not exist This is a fascinating paradox why do neurologists and neurosurgeons continue to use these iconic language models in everyday decision making In this book the author uses his background as a neurosurgeon and a neuroscientist to provide some answers to this question The book acquaints clinicians and researchers with the many different aspects of language representation in the brain It provides a historical overview of functional localisation as well as insights into the misjudgements that have kept the localist doctrine alive It creates an awareness of the need to integrate clinical observations and neuroscientific theories if we want to progress further in clinical language research and patient care

Neurogenic Language Disorders in Children Franco Fabbro, 2021-12-28 Language disorders in children are one of the most frequent causes of difficulties in communication social interaction learning and

academic achievement It has been estimated that over 5% of children present with some kind of language disorder This volume illustrates the state of the art in neurogenic language disorders in children The most recent findings about acquired epileptiform aphasias from Landau Kleffner syndrome to autistic regression are presented and discussed Language disorders in children with early brain lesions are reviewed in relation to the side of the lesion and their epileptic correlates e g paroxysmal abnormalities during NREM sleep New clinical reports are presented and a large discussion is held on language disorders due to malformation or tumor lesions localized to the Posterior Fossa The last part of the volume reviews the state of the art on some of the most debated clinical neurolinguistic pictures of developmental age such as crossed aphasia in children the modality and types of aphasia recovery in children and persistent acquired childhood aphasia This volume is the fifth in a series of books commissioned by the International Association of Logopedics and Phoniatrics *Phoniatrics III* Antoinette am Zehnhoff-Dinnesen, Antonio Schindler, Patrick G. Zorowka, 2025-03-22 This book series in three volumes draws on the specialized insights and extensive clinical experience of phoniatric experts to offer a basis for the development of concerted European training standards with the goal of guaranteeing a high quality of phoniatric care for all European patients Communication disorders in all age groups are covered and the interdisciplinary character of phoniatrics is mirrored in the inclusion of contributions from a range of other medical and non medical disciplines This third volume is devoted to acquired motor speech and language disorders dysarthria dyspraxia and aphasia swallowing disorders and phoniatric aspects in treatment of COVID 19 infections Basic aspects including etiology and pathogenesis are fully addressed and guidance provided on diagnostic methods differential diagnosis prevention treatment rehabilitation and prognosis The reader will benefit from numerous color photos tables as well as supplementary electronic material including audio and video examples This book is intended for residents and practitioners in phoniatrics and also for ENT physicians medical students logopedists and speech and language pathologists and therapists *Aphasia and Related Neurogenic Communication Disorders* Ilias Papathanasiou, Patrick Coppens, Constantin Potagas, 2011-11-11 Aphasia and Related Neurogenic Communication Disorders covers topics in aphasia motor speech disorders and dementia Organized by symptom rather than syndrome this text provides a foundation for understanding the disorders and learning how to apply basic theory to clinical practice in the development of rehabilitation objectives Aphasia and Related Neurogenic Communication Disorders applies a clinical integration of the psychosocial with the neuropsychological approach in adult language rehabilitation Written by international authorities in the field of aphasia and related communication disorders and based on the ICF framework this unique text features diverse contribution covering global issues Important Notice The digital edition of this book is missing some of the images or content found in the physical edition **Memory** Peter P.
