Applied Economics A Critical Realist Approach:

Applied Economics and the Critical Realist Critique Paul Downward, 2005-08-18 This intriguing new book examines and analyses the role of critical realism in economics and specifically how this line of thought can be applied to the real world With contributions from such varying commentators as Sheila Dow Wendy Olsen and Fred Lee this new book is unique in its approach and will be of great interest to both economic methodologists and those involved in applied economic studies

Handbook of Research Methods and Applications in Heterodox Economics The Late Frederic S. Lee, Bruce Cronin, 2016-04-29 Despite the important methodological critiques of the mainstream offered by heterodox economics the dominant research method taught in heterodox programmes remains econometrics This compelling Handbook provides a comprehensive introduction to a range of alternative research methods invaluable for analysing the data prominent in heterodox studies Providing a solid basis for a mixed methods approach to economic investigations the expertly crafted contributions are split into three distinct sections philosophical foundation and research strategy research methods and data collection and applications Introductions to a host of invaluable methods such as survey historical ethnographic experimental and mixed approaches together with factor cluster complex and social network analytics are complemented by descriptions of applications in practice Practical and expansive this Handbook is highly pertinent for students and scholars of economics particularly those dedicated to heterodox approaches as it provides a solid reference for mixed methods not available in mainstream economics research methods courses

Ontology and Economics Edward Fullbrook, 2008-10-27 Tony Lawson has become a major figure of intellectual controversy on the back of juxtaposing two relatively simple and seemingly innocuous ideas He has argued firstly that success in science depends on finding and using methods including modes of reasoning appropriate to the nature of the phenomena being studied and also that there are important differences between the nature of the objects of study of natural sciences and those of social science This original book brings together some of the world's leading critics of economics orthodoxy to debate Lawson's contribution to the economics literature The debate centres on ontology which means enquiry into the nature of what exists and in this collection scholars such as Bruce Caldwell John B Davis and Geoffrey M Hodgson present their thoughtful criticisms of Lawson's work Lawson himself presents his reactions to these criticisms with full chapter replies to each of the scholars included This book is particularly useful for students and researchers concerned primarily with methodology and future development of economics It is also relevant to the concerns of philosophers of science and to all social scientists interested in methodological issues

Essays on: The Nature and State of Modern Economics Tony Lawson, 2015-04-17 What do modern academic economists do What currently is mainstream economics What is neoclassical economics And how about heterodox economics How do the central concerns of modern economists whatever their associations or allegiances relate to those traditionally taken up in the discipline And how did economics arrive at its current state These and various cognate questions and concerns are

systematically pursued in this new book by Tony Lawson. The result is a collection of previously published and new papers distinguished in providing the only comprehensive and coherent account of these issues currently available. The financial crisis has not only revealed weaknesses of the capitalist economy but also highlighted just how limited and impoverished is modern academic economics. Despite the failings of the latter being more widely acknowledged now than ever, there is still an enormous amount of confusion about their source and true nature. In this collection, Tony Lawson also identifies the causes of the discipline's failings and outlines a transformative solution to its deficiencies. Amongst other things, Lawson advocates for the adoption of a more historical and philosophical orientation to the study of economics, one that deemphasizes the current focus on mathematical modelling while maintaining a high level of analytical rigour. In so doing, Lawson argues for a return to long-term systematic and sustained projects in the manner pursued by the likes of Marx, Veblen, Hayek, and Keynes, concerned first and foremost with advancing our understanding of social reality. Overall, this forceful and persuasive collection represents a major intervention in the on-going debates about the nature, state, and future direction of economics.

Social Ontology and Modern Economics Stephen Pratten, 2014-09-25. Economists increasingly recognise that engagement with social ontology, the study of the basic subject matter and constitution of social reality, can facilitate more relevant analysis. This growing recognition amongst economists of the importance of social ontology is due very considerably to the work of members of the Cambridge Social Ontology Group. This volume brings together important papers by members of this group, some previously unpublished, in a collection that reveals the breadth and vitality of this Cambridge project. It provides a brilliant introduction to the central themes explored, perspectives sustained, insights achieved, and how the project is moving forward. An initial set of papers examine how ontology is understood and justified within this Cambridge project and consider how it compares with prominent historical and contemporary alternatives. The majority of the included papers involve social ontological analysis being put to work directly in underlabouring for specific types of development in economics. The papers are grouped according to their contribution to clarifying and developing: i) various competing traditions and projects of modern economics; ii) history of thought; contributions; iii) methodological concerns; iv) ethics; and v) conceptions of particular aspects of social reality, including money, gender, technology, and institutions. Background to and a brief history of the Cambridge group is provided in the Introduction. Social Ontology and Modern Economics will be of interest not only to economists but also to philosophers of social science, social theorists, and those eager to explore the nature of gender, social institutions, and technology.

Economics in the Shadows of Darwin and Marx Geoffrey Martin Hodgson, 2006. Darwin and Marx stand out as the supreme theorists of structural change in complex living systems. This collection of essays establishes the importance of Darwinism for economics and other social sciences and compares the Darwinian legacy with that of Marx. It adopts a Darwinian evolutionary approach to the analysis of institutions and routines.

Alternatives to Economics Clive Beed, Cara Beed, 2006-12-14. Alternatives to Economics outlines the Christian thought system and its value.

as an alternative to secular social science in the development of socio economic policies Co authors Clive and Cara Beed demonstrate how the Christian thought system could be applied to issues such as distribution of wealth and the growing unemployment problem The Christian thought system provides an alternative way of describing explaining and formulating policies for socio economic matters from that of secular social science Alternatives to Economics finds the current state of economics severely flawed with no set of value free objective tools that can be used to analyze the economy This book seeks to present these Christian thought system tools to both Christians and non Christians *Post Keynesian Econometrics, Microeconomics and the Theory of the Firm* Sheila C. Dow, John Hillard, 2002 This is the first of two volumes celebrating Keynes contribution to economics and the development of post Keynesian economics in recent years The book is divided into three sections the first of which examines general issues including investment information labour economics and monetary theory In the second part the discussion is extended to uncertainty and addresses the associated issues of rationality trust and speculation The third and final section focuses on international economics and considers the theory of comparative advantage the fight against speculation in foreign exchange markets Tobin s transactions and the Maastricht Treaty
