**Aphids on the World's Herbaceous Plants and Shrubs, 2 Volume Set** R. L. Blackman, Victor F. Eastop, 2008-04-15  
Aphids are well known as pests of agriculture horticulture and forestry but they are also one of the most biologically interesting groups of plant feeding insects and thus have attracted the attention of biologists in many research fields such as ecology biodiversity physiology behaviour and genetics Following the successful format of previous books on the world s aphids by the same authors these two volumes provide a comprehensive species by species account of the aphids on the world s herbaceous plants and shrubs They can be used not only as an identification guide and information source for entomologists and taxonomists throughout the world but also as a unique database for studies of biodiversity and insect plant relationships In all 3120 aphid species in 340 genera are covered feeding on 2150 genera of host plants Volume 1 features comprehensive host lists and keys to the aphids colonizing each plant genus This information is supplemented in Volume 2 by a systematic account of all the aphid species which provides information on their appearance in life host range geographical distribution and life cycles There are 357 original line drawings 252 photographs of slide mounted specimens and 1000 references Aphids on the World s Herbaceous Plants and Shrubs is the culmination of many years of work by two leading specialists and provides an essential research tool and standard reference work for entomologists in universities and research institutes throughout the world

**Aphids as Crop Pests, 2nd Edition** Helmut F van Emden, Richard Harrington, 2017-08-23  
Aphids are among the major global pest groups causing serious economic damage to many food and commodity crops in most parts of the world This revision and update of the well received first edition published ten years ago reflects the expansion of research in genomics endosymbionts and semiochemicals as well as the shift from control of aphids with insecticides to a more integrated approach imposed by increasing resistance in the aphids and government restrictions on pesticides The book remains a comprehensive and up to date reference work on the biology of aphids the various methods of controlling them and the progress of integrated pest management as illustrated by ten case histories

*Aphids on the World's Herbaceous Plants and Shrubs, 2 Volume Set* R. L. Blackman, Victor F. Eastop, 2007-01-23  
Aphids are well known as pests of agriculture horticulture and forestry but they are also one of the most biologically interesting groups of plant feeding insects and thus have attracted the attention of biologists in many research fields such as ecology biodiversity physiology behaviour and genetics Following the successful format of previous books on the world s aphids by the same authors these two volumes provide a comprehensive species by species account of the aphids on the world s herbaceous plants and shrubs They can be used not only as an identification guide and information source for entomologists and taxonomists throughout the world but also as a unique database for studies of biodiversity and insect plant relationships In all 3120 aphid species in 340 genera are covered feeding on 2150 genera of host plants Volume 1 features comprehensive host lists and keys to the aphids colonizing each plant genus This information is supplemented in Volume 2 by a systematic account of all the aphid

species which provides information on their appearance in life host range geographical distribution and life cycles There are 357 original line drawings 252 photographs of slide mounted specimens and 1000 references Aphids on the World s Herbaceous Plants and Shrubs is the culmination of many years of work by two leading specialists and provides an essential research tool and standard reference work for entomologists in universities and research institutes throughout the world

*Aphid-plant Genotype Interactions* Russell K. Campbell,Raymond D. Eikenbary,1990 The great majority of the contributions to be found in this volume result from oral presentations given at a symposium during the XVIII International Congress of Entomology entitled Mechanisms of Aphid Plant Genotype Interactions which was held in Vancouver Canada in July 1988 Aphids represent a vast and diverse assemblage of insects Among these are many of great economic importance by virtue of their detrimental effects to important crop or ornamental plants Even those aphids having little or no economic impact or that cause no damage to their hosts except nutrient removal may yet be of great theoretical interest in that their often intimate association with their hosts provides excellent systems for the study of the evolution of adaptation Other

factors such as environmental influences and associations with pathogenic saprophytic or symbiotic microorganisms may play an influential role in modifying the ultimate outcome of aphid plant interactions Substantive future progress towards the elucidation of these processes can only be expected if much greater understanding is obtained of the interactions of all the organisms involved in the plant based community

**Aphids on the World's Trees** Roger L. Blackman, Victor Frank Eastop, 1994 This book provides a comprehensive species by species account of all the world s tree dwelling aphids It can be used both as an identification guide by entomologists and taxonomists and as a database in studies of biosystematics and biodiversity In all 1758 aphid species are covered feeding on trees in 355 genera There are detailed host lists and illustrated keys to the aphids colonizing each tree genus followed by a systematic treatment of the aphid species in alphabetical order of genera with information on appearance in life host range distribution life cycle and natural enemies There are 722 drawings 108 photographs and more than 1800 literature references The volume will be a standard reference for workers in entomology and forestry
