Social Simulation for a Digital Society Diane Payne, Johan A. Elkink, Nial Friel, Thomas U. Grund, Tamara Hochstrasser, Pablo Lucas, Adrian Ottewill, 2019-11-18 Social Simulation for a Digital Society provides a cross section of state of the art research in social simulation and computational social science With the availability of big data and faster computing power the social sciences are undergoing a tremendous transformation Research in computational social sciences has received considerable attention in the last few years with advances in a wide range of methodologies and applications Areas of application of computational methods range from the study of opinion and information dynamics in social networks the formal modeling of resource use the study of social conflict and cooperation to the development of cognitive models for social simulation and many more This volume is based on the Social Simulation Conference of 2017 in Dublin and includes applications from across the social sciences providing the reader with a demonstration of the highly versatile research in social simulation with a particular focus on public policy relevance in a digital society Chapters in the book include contributions to the methodology of simulation based research theoretical and philosophical considerations as well as applied work This book will appeal to students and researchers in the field [Applications of Simulation to Social Sciences](#) Gérard Ballot, G. Weisbuch, 2000-01-01 Is society reducible to a computer programme Nobody would make such a claim but the chapters of this text illustrate how computer simulations can help us to understand social phenomena The applications described here concern all aspects of social sciences and include topics often studied within the disciplines of economics political science or geography **Tools and Techniques for Social Science Simulation** Ramzi Suleiman, Klaus G. Troitzsch, Nigel Gilbert, 2012-12-06 The use of computer simulations to study social phenomena has grown rapidly during the last few years Many social scientists from the fields of economics sociology psychology and other disciplines now use computer simulations to study a wide range of social phenomena The availability of powerful personal computers the development of multidisciplinary approaches and the use of artificial intelligence models have all contributed to this development The benefits of using computer simulations in the social sciences are obvious This holds true for the use of simulations as tools for theory building and for its implementation as a tool for sensitivity analysis and parameter optimization in application oriented models In both simulation provides powerful tools for the study of complex social systems especially for dynamic and multi agent social systems in which mathematical tractability is often impossible The graphical display of simulation output renders it user friendly to many social scientists that lack sufficient familiarity with the language of mathematics The present volume aims to contribute in four directions 1 To examine theoretical and methodological issues related to the application of simulations in the social sciences By this we wish to promote the objective of designing a unified user friendly simulation toolkit which could be applied to diverse social problems While no claim is made that this objective has been met the theoretical issues treated in Part 1 of this volume are a contribution towards this objective **Computer**

Applications in the Social Sciences Edward E. Brent, Ronald E. Anderson, 1990 Presenting an introduction to computing and advice on computer applications this book examines hardware and software with respect to the needs of the social scientist It offers a framework for the use of computers with focus on the work station the center of which is a personal computer connected to networks by a telephone based modem

Modelling and Simulation in the Social Sciences from the Philosophy of Science Point of View R. Hegselmann, Ulrich Mueller, Klaus G. Troitzsch, 1996-06-30 Model building in the social sciences can increasingly rely on well elaborated formal theories At the same time inexpensive large computational capacities are now available Both make computer based model building and simulation possible in social science whose central aim is in particular an understanding of social dynamics Such social dynamics refer to public opinion formation partner choice strategy decisions in social dilemma situations and much more In the context of such modelling approaches novel problems in philosophy of science arise which must be analysed the main aim of this book Interest in social simulation has recently been growing rapidly world wide mainly as a result of the increasing availability of powerful personal computers The field has also been greatly influenced by developments in cellular automata theory from mathematics and in distributed artificial intelligence which provided tools readily applicable to social simulation This book presents a number of modelling and simulation approaches and their relations to problems in philosophy of science It addresses sociologists and other social scientists interested in formal modelling mathematical sociology and computer simulation as well as computer scientists interested in social science applications and philosophers of social science
