Apoptotic Cell Clearance in Health and Disease Estee Kurant, Amiram Ariel, Kirsten Lauber, 2018-12-27 Clearance of apoptotic cells is essential for proper development, homeostasis and termination of immune responses in multicellular organisms. Thus, cellular and molecular players taking part in the sequential events of this process are of great interest. Research in the last 20 years has indicated that specific ligands and receptors take part in the attraction

of immune cells toward apoptotic targets and in the interactions between apoptotic cells and professional as well as non professional phagocytes that engulf them Moreover phagocytosis of apoptotic cells efferocytosis leads to significant phenotypic changes in the engulfing cells suggesting that it is a major fate determining event for phagocytes Particularly efferocytosis has an important impact on the inflammation resolution axis as well as embryonic development and tissue morphogenesis Deficiencies in these processes can result in health threats such as autoimmunity atherosclerosis bone loss obesity infertility neurodegeneration fibrosis and cancer This eBook brings together 24 original research and review manuscripts that cover various aspects of apoptotic cell removal during normal development and homeostasis as well as in tumorigenesis and regenerative processes following injury
