## **Advanced Groundwater Remediation Active And Passive Technologies:**

*Advanced Groundwater Remediation* F. G. Simon, 2002      *Advanced Groundwater Remediation* Franz-Georg Simon, T. Meggyes, Chris McDonald, 2002 This book presents a concise summary of advanced groundwater treatment methods especially pump and treat and permeable reactive barriers The topics include heavy metal removal with special emphasis on uranium and sorption one of the basic mechanisms in groundwater remediation      *Long-Term Performance of Permeable Reactive Barriers* K.E. Roehl, T. Meggyes, F.G. Simon, D.I. Stewart, 2005-04-27 While extensive research has been performed on many technological aspects of permeable reactive barriers and a number of contaminants have so far been successfully treated by PRB systems long term performance has not been extensively considered and little is known about the processes influencing long term behaviour This gap in our knowledge is all the more disadvantageous as design life has a decisive influence on the economic viability of PRBs The book describes methods for evaluation and enhancement of the long term performance of PRB systems especially of those targeting heavy metals specifically uranium and organic contaminants by sorption and or precipitation mechanisms Major topics in the book are Selection and characterisation of suitable reactive materials Characterisation of the relevant contaminant attenuation processes Developing new contaminant binding chemical compounds ligands Accelerated testing methods to assess the long term performance of the attenuation mechanisms in PRBs Evaluation of the influence of site characteristics on PRB performance Monitoring of existing and new field installations Coupling of electrokinetic techniques and PRB systems Large scale laboratory and field tests and their results It addresses the long term performance of PRBs an important feature of this novel remediation technology systematically It deals extensively with heavy metal removal with special emphasis on uranium A number of case studies experiences with large scale modelling and test site experiments provide insight into the practical application of the results This volume will contribute to the science underpinning groundwater remediation and this will result in the improvement of quality of life and health and safety A systematic approach to investigating the long term performance of permeable reactive barriers Development of new contaminant binding chemical compounds ligands accelerated testing methods to assess the long term performance and efficiency enhancing electrokinetic techniques Extensive data and information on a Hungarian uranium mining facility once a carefully kept secret of the Soviet Union      *Sustainable Heavy Metal Remediation* Eldon R. Rene, Erkan Sahinkaya, Alison Lewis, Piet N.L. Lens, 2017-07-24 This book covers the principles underlying mechanisms thermodynamic functions kinetics and modeling aspects of sustainable technologies particularly from the standpoint of applying physical chemical and biological processes for the treatment of wastewater polluted with heavy metals Particular emphasis has been given to technologies that are based on adsorption electro coagulation bio precipitation bio solubilization phytoremediation and microbial electrolysis Metal contamination in the environment is one of the persisting global issues The adverse health effects of heavy metals on human beings and its impact on the environment has been well documented

Several physico chemical and biological technologies have been successfully implemented to prevent and control the discharge of industrial heavy metal emissions. On the contrary, metal resource depletion has also accelerated dramatically during the 20th century due to rapid advances in industrial engineering and medical sciences which require large amounts of raw materials. To meet the global metal demand in recent years, novel research lines have started to focus on the recovery of metals from metal-contaminated waste streams. In order to conflate both metal removal and recovery, new technologies have been successfully tested both at the lab and pilot scale. The target audience of this book primarily comprises of research experts, practicing engineers in the field of environmental chemical technology and graduate students.

Water Sustainability Harry X. Zhang, 2023-07-27. This newly updated Water Sustainability volume of the Encyclopedia of Sustainability Science and Technology (ESST) takes a holistic view of the full water cycle and integrates the water themes into sustainability science and technology. With the increasing pressures of population growth, water scarcity, flooding, water pollution, climate impacts, and competition of water uses among municipal, agricultural, industrial sectors, and ecosystems, there is a growing trend in promoting Integrated Water Management and One Water concept worldwide. This reference volume covers multi-disciplinary sustainability topics from the perspective of integrated water management, which includes drinking water, wastewater, stormwater, reclaimed water, and groundwater. It also spans cross-cutting themes of the water-energy-food nexus, showing how all of these sectors are inextricably linked. Water Sustainability is a comprehensive resource for a broad audience of scientists and engineers, researchers and practitioners, and decision makers whose objective is to advance sustainable water management.

**Geotechnical and Environmental Aspects of Waste Disposal Sites** R.W. Sarsby, A.J. Felton, 2006-11-16. Despite the importance of preserving the environment in our developing world, activity involving the extraction of natural resources and the disposal of waste continues to increase. Such operations need to be conducted in a carefully controlled manner, protecting both the natural environment and the communities who live in the vicinity. Every four years, the GREEN Geotechnics Related to the Environment symposia are held, recognizing the major contribution that geotechnical engineering makes towards achieving the aforementioned goals. The meeting provides an international forum for the exchange of ideas, experiences, and innovations. The GREEN 4 meeting discussed engineered disposal of waste in landfills, land contaminated by waste disposal, and fluid flows, industrial waste dumps from mineral mining and extraction, and environmental management. The book contains expertise from nineteen countries around the world and provides an integrated view of the latest research and practice in waste disposal. New and evolving ideas, ongoing concerns, and developments throughout the world are discussed.

Engineering Tools for Environmental Risk Management Katalin Gruiz, Tamás Meggyes, Éva Fenyvesi, 2019-01-08. The four volumes of the book series Engineering Tools for Environmental Risk Management deal with environmental management, assessment, monitoring, tools, environmental toxicology, and risk reduction technologies. This last volume focuses on engineering solutions usually needed for industrial-contaminated sites.

where nature's self remediation is inefficient or too slow The success of remediation depends on the selection of an increasing number of conventional and innovative methods This volume classifies the remedial technologies and describes the reactor approach to understand and manage in situ technologies similarly to reactor based technologies Technology types include physicochemical biological or ecological solutions where near natural sustainable remediation has priority A special chapter is devoted to natural attenuation where natural changes can help achieve clean up objectives Natural attenuation and biological and ecological remediation establish a serial range of technologies from monitoring only to fully controlled interventions using just the natural ecosystem or sophisticated artificial living systems Passive artificial ecosystems and biodegradation based remediation in addition to natural attenuation demonstrate the use of these green technologies and how engineering intervention should be kept at a minimum to limit damage to the environment and create a harmonious ecosystem Remediation of sites contaminated with organic substances is analyzed in detail including biological and physicochemical methods Comprehensive management of pollution by inorganic contaminants from the mining industry leaching and bioleaching and acid mine drainage is studied in general and specifically in the case of an abandoned mine in Hungary where the innovative technology of combined chemical and phytostabilization has been applied The series of technologies is completed by electrochemical remediation and nanotechnologies Monitoring verification and sustainability analysis of remediation provide a comprehensive overview of the management aspect of environmental risk reduction by remediation This book series focuses on the state of knowledge about the environment and its conscious and structured application in environmental engineering management and decision making
