Piezoelectric Actuators and Generators for Energy Harvesting Sergey N. Shevtsov, Arkady N. Soloviev, Ivan A. Parinov, Alexander V. Cherpakov, Valery A. Chebanenko, 2018-04-20. This book presents new approaches to R D of piezoelectric actuators and generators of different types based on established original constructions and contemporary research into framework of theoretical, experimental and numerical methods of physics, mechanics and materials science. Improved technical solutions incorporated into the devices demonstrate high output values of voltage and power allowing application of the goods in various areas of energy harvesting. The book is divided into seven chapters each presenting main results of the chapter along with a brief exposition of novel findings from around the world providing context for the author's results. It presents particular results of the Soviet and Russian schools of Mechanics and Material Sciences not previously available outside of Russia.

Mechanics of Materials in Modern Manufacturing Methods and Processing Techniques Vadim Silberschmidt, 2020-04-03. Mechanics of Materials in Modern Manufacturing Methods and Processing Techniques provides a detailed overview of the latest developments in the mechanics of modern metal forming manufacturing. Focused on mechanics as opposed to process it looks at the mechanical behavior of materials exposed to loading and environmental conditions related to modern manufacturing processes covering deformation as well as damage and fracture processes. The book progresses from forming to machining and surface treatment processes and concludes with a series of chapters looking at recent and emerging technologies. Other topics covered include simulations in autofrettage processes, modeling strategies related to cutting, simulations, residual stress caused by high thermomechanical gradients and pultrusion as well as the mechanics of the curing process, forging and cold spraying among others. Some non-metallic materials such as ceramics and composites are covered as well. Synthesizes the latest research in the mechanics of modern metal forming processes. Suggests theoretical models and numerical codes to predict mechanical responses. Covers mechanics of shot peening, pultrusion, hydroforming, magnetic pulse forming. Considers applicability of different materials and processes for optimum performance.
