*Advances in Distributed Multimedia Systems* S. K. Chang, 1999 This volume addresses fundamental design issues and research topics related to multimedia systems and provides a comprehensive study of the issues Topics covered include distributed multimedia databases and computing multiparadigmatic information retrieval modelling and analysis of distributed multimedia systems OS support for distributed multimedia systems multimedia communications and networking multimedia digital libraries and mail systems multimedia human computer interaction multimedia applications for CSCW distant education electronic commerce teleconferencing and telemedicine visual and multidimensional languages for multimedia applications multimedia workflows and multimedia stream synchronization In addition a number of tutorial and overview articles are included so that the volume strikes a balance between introductory tutorials and advanced topics

*Advances in Distributed Systems* Sacha Krakowiak, Santosh Shrivastava, 2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS It was a collaborative project involving research institutes and universities in Bologna Grenoble Lausanne Lisbon Rennes Rocquencourt Newcastle and Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety
