From July 31 to August 13 a NATO Advanced Study Institute on Photosynthesis was held at the Anargyrios and Korgialenios School on the Island of Spetsai Greece The Institute focused on techniques and recent advances in photosynthesis research and brought together teachers and students with a wide range of interest and experience It was a very stimulating occasion which allowed cross fertilization to occur between biophysicists biochemists molecular biologists and physiologists Lectures and discussions ranged from the description of the molecular structure of the photosynthetic bacterial reaction centre and of

tobacco Rubisco through to the regulation of carbon metabolism and the application of genetic engineering This book is comprised of the contents of the major lectures and a selection of relevant posters displayed at the Institute Taken together the book is an excellent representation of the most up to date thoughts and activities in photosynthesis research across a wide but interlocking spectrum of topics The papers presented here are a written record of the high quality of both the lecturers and students alike and emphasises the value of the NATO ASI series as a reference source The successful organisation of the Institute and the production of this book would not have been possible without the support of our colleagues We therefore wish to thank Pam Cook Lyn Barber Niki Gounaris Alison Telfer Sotiria Nikolaidon David Chapman Steven Mayes and Wei Qiu Wang for all their help during the course of the Institute
