Innovations in the assessment and treatment of TBI and co-occurring conditions in military connected populations Jay M. Uomoto, Chandler Rhodes, Jesse R. Fann, 2026-02-03 This research topic aims to explore and highlight innovative approaches for assessing and treating Traumatic Brain Injury TBI and its associated conditions among military connected populations Such TBIs can occur in combat theatre during training and off duty TBIs often result in a wide range of physical neurological psychological and behavioral disorders The complexity in assessing and treating the aftereffects of TBI increases when they are associated with other co morbidities such as post traumatic stress disorder PTSD chronic pain headaches neuroendocrine changes sleep disorders fatigue and other medically unexplained symptoms Treating the aftereffects of TBI in a military setting therefore presents unique challenges due to co occurring conditions and the impact of factors like combat stress and blast wave exposures Key areas of interest for this exploration include

- Understanding the distinctive challenges in assessing and treating TBI and co morbidities in military populations
- The adaptation of Evidence Based Treatments EBTs to address the unique needs and challenges faced by military personnel
- Evaluating the current modes of assessment and treatment while identifying areas that require more innovative approaches
- Exploring the development and use of technological advancements including AI and machine learning in diagnosing and treating TBI PTSD and other related conditions
- Examining the effectiveness of combined therapeutic strategies such as pharmacological and non pharmacological treatments for TBI s comprehensive management
- Investigating the role and adaptation of mindfulness based therapies Acceptance and Commitment Therapy Dialectical Behavior Therapy Creative Arts Therapies and other innovative approaches and their impact on patient outcomes
- Understanding the role of placebo and nocebo effects safety and efficacy concerns the concept of clinical equipoise and other bioethical dilemmas in relation to novel or innovative treatments for military related TBI
- Exploring multimodal evaluation of outcomes by combining self reports with neurophysiological measures such as Heart Rate Variability HRV accelerometers motion sensors as well as with neurological biomarkers such as genomics neuroimaging and blood markers
- Studying the use of intensive longitudinal methodologies including time series designs ecological momentary assessment and experience sampling to track treatment processes and outcomes
- Investigating mixed method approaches including how the integration of quantitative and qualitative data analysis can provide a more comprehensive understanding of TBI and related conditions

Through this research we aim

to push the boundaries of traditional diagnostic and therapeutic approaches seeking improved methods of dealing with TBI and its co occurring conditions in military settings The ultimate goal is to enhance the quality of life and healthcare outcomes for military personnel worldwide We are happy to accept submissions of original research and review papers on this important and vast research area □□□□□□□□,1990 **Creative Arts Therapies Manual** Stephanie L. Thomashoff,Ekaterina Sukhanova,2008 Through an interdisciplinary multicultural approach this book explores the role of psychiatric art in facilitating personal empowerment fostering the healing process and confronting stigma Today when we are constantly reminded of the dangers of thinking in exclusive terms art affords us a model of dialogue in which the other is accepted as an equal conversation partner Art fosters co operative communication in which dignity and individuality of a mental health patient may be reaffirmed At the same time art allows for critical distance retrospection and vast opportunities for individual choice and thus may be conducive to an improved self image and self esteem The book discusses norm and its transgression as aesthetic categories influencing the understanding of outsider and mainstream art The role of art as a social force that contributes to the way mental health and illness are perceived in a given community is also addressed Understanding the mechanisms underlying aesthetic perceptions of art helps us understand how psychiatric art can be used

to help fight stigma associated with illness Special attention is given to the semiotics of the portrait a genre with an especially marked dialogical potential that still lacks a systematic study in the context of psychiatric art The book is addressed to psychiatrists other mental health professionals as well as scholars in humanities and social sciences concerned with the issues of creativity and the mind
