Modern Methods of Plant Analysis When the handbook Modern Methods of Plant Analysis was first introduced in 1954 the considerations were 1 the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods 2 the inavailability of many new analytical methods concealed in specialized journals not normally accessible to experimental plant biologists 3 the fact that in the methods sections of papers the description of methods is frequently so compact or even sometimes so incomplete that experiments are difficult to reproduce These considerations still stand today The series was highly successful seven volumes appearing between 1956 and 1964 Since today there is still a demand for the old series the publisher has decided to resume publication of Modern Methods of Plant Analysis It is hoped that the New Series will be as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were It is difficult to single out the major reasons for success of any publication but we believe that the methods published in the first series were up to date at the time and the descriptions as applied to plant material so complete in themselves that there was little need to consult other publications
