U.S. Nuclear Regulatory Commission,1981 *Elastic-plastic Fracture* ,1979 *Elastic-plastic Fracture: Fracture resistance curves and engineering applications* ,1983 Advanced Computational Methods and Geomechanics Shenghong Chen,2023-01-01 The aim of this book is intended through parallel expounding to help readers comprehensively grasp the intrinsic features of typical advanced computational methods These methods are created in recent three decades for the understanding of the post failure of geo materials accompanied with discontinuous and finite deformation dislocation as well as the violent fluid structure interaction accompanied with strong distortion of water surface The strong points and weak points of the formalisms for governing equations the discretization schemes the nodal interpolation approximation of field variables and their connectivity via support domains covers or enrichments the basic algorithms etc are clarified Being aware of that the differences in these methods are not so large as at the first glance this book will help readers to select appropriate methods to improve the methods for their specific purpose and to evaluate the reliability applicability of the outcomes in the hazard evaluation of geotechnical hydraulic structures beyond extreme work situation This book may be looked at as an advanced continuation of Computational Geomechanics and Hydraulic Structures by the author 2018 Springer Verlag ISBN 978 981 10 8134 7 which elaborates the fundamental computational methods in geomechanics for the routine design of geotechnical hydraulic engineering *Advances in Engineering Plasticity* T.X. Atkins,Y. W. Mai,1985 *Elastic-Plastic Fracture , Non-Linear Fracture* W.G. Knauss,Ares J. Rosakis,2013-03-09 From time to time the International Journal of Fracture has presented special matters thought to be of interest to its readers In previous issues for example Dr H W Liu as Guest Editor assembled a series of review papers dealing with fatigue processes and characteristics in metals and non metals December 1980 and April 1981

Five years ago Guest Editor W G Knauss collected works dealing with dynamic fracture March and April 1985 Continuing this policy Dr W G Knauss and Dr A J Rosakis of the California Institute of Technology as Guest Editors have now organized an extensive set of papers concerning the influence of non linear effects upon the mechanics of the fracture process This collection is based upon contributions to a relatively small international Symposium on Non Linear Fracture Mechanics held under the auspices of the International Union of Theoretical and Applied Mechanics IUTAM and convened at the California Institute of Technology in March 1988 It should be noted that although the description of non linear fracture inherently encompasses a strong material science component this aspect is not heavily emphasized in the ensuing papers due to the intentional focus upon mechanics Volume 42 of the International Journal of Fracture will therefore in successive issues deal respectively with topics in 1 Damage 2 Interfaces and Creep 3 Time Dependence and 4 Continuum Plasticity On behalf of the editors and publishers I wish to express our appreciation to Dr Knauss Dr Rosakis and their colleagues for their collective efforts

Progress in Fracture Mechanics G. C. Sih, D. Francois, 2014-06-28 Progress in Fracture Mechanics Fracture Mechanics Research and Technological Activities of Nations around the World is a collection of papers that presents the contemporary state of fracture mechanics research in different countries This collection arises from the need to access various fracture mechanics materials in one publication since fracture mechanics varies in parameters methods of testing and jargons This text will be of great use to students researchers and practitioners of materials science

Carbon Materials for Advanced Technologies T.D. Burchell, 1999-07-22 The inspiration for this book came from an American Carbon Society Workshop entitled Carbon Materials for Advanced Technologies which was hosted by the Oak Ridge National Laboratory in 1994 Chapter 1 contains a review of carbon materials and emphasizes the structure and chemical bonding in the various forms of carbon including the four allotropes diamond graphite carbynes and the fullerenes In addition amorphous carbon and diamond films carbon nanoparticles and engineered carbons are discussed The most recently discovered allotrope of carbon i e the fullerenes along with carbon nanotubes are more fully discussed in Chapter 2 where their structure property relations are reviewed in the context of advanced technologies for carbon based materials The synthesis structure and properties of the fullerenes and nanotubes and modification of the structure and properties through doping are also reviewed Potential applications of this new family of carbon materials are considered The manufacture and applications of adsorbent carbon fibers are discussed in Chapter 3 The manufacture structure and properties of high performance fibers are reviewed in Chapter 4 and the manufacture and properties of vapor grown fibers and their composites are reported in Chapter 5 The properties and applications of novel low density composites developed at Oak Ridge National Laboratory are reported in Chapter 6 Coal is an important source of energy and an abundant source of carbon The production of engineering carbons and graphite from coal via a solvent extraction route is described in Chapter 7 Applications of activated carbons are discussed in Chapters 8 10 including their use in the automotive arena as evaporative loss emission traps Chapter 8 and in

vehicle natural gas storage tanks Chapter 9 The application of activated carbons in adsorption heat pumps and refrigerators is discussed in Chapter 10 Chapter 11 reports the use of carbon materials in the fast growing consumer electronics application of lithium ion batteries The role of carbon materials in nuclear systems is discussed in Chapters 12 and 13 where fusion device and fission reactor applications respectively are reviewed In Chapter 12 the major technological issues for the utilization of carbon as a plasma facing material are discussed in the context of current and future fusion tokamak devices The essential design features of graphite moderated reactors including gas water and molten salt cooled systems are reviewed in Chapter 13 and reactor environmental effects such as radiation damage and radiolytic corrosion are discussed The fracture behaviour of graphite is discussed in qualitative and quantitative terms in Chapter 14 The applications of Linear Elastic Fracture Mechanics and Elastic Plastic Fracture Mechanics to graphite are reviewed and a study of the role of small flaws in nuclear graphites is reported
