**Books in Print**, 1994 The Publishers' Trade List Annual, 1893

*Books in Print Supplement* ,1994      **Insect Neurohormones** Marie Raabe,2012-12-06 The discovery of insect neurohormones dates from the earliest experimental investigations in insect endocrines and the matter cannot be discussed without evoking the names of its pioneers Kopec Wigglesworth Fraenkel Whereas the experiments demonstrated the existence of the first known neurohormones the formulation of the concept of neurosecretion was of fundamental importance to further progress and tribute must be paid to Ernst and Berta Scharrer The recent proliferation of investigations into insect neurohormones has created the need for an overall review of the data Our knowledge of the subject is voluminous and the evidence clearly demonstrates that neurohormones play a part in most insect regulatory processes This book analyzes and synthesizes the data starting from neurosecretion i e source sites and release modes of neurohormones and continuing through the various functions in which neurohormones have been shown to be involved endocrine gland activity diapause reproduction visceral muscle functioning color change behavior water and ion balance protein sugar and lipid metabolism and tanning and other processes occurring at the cuticle level In each chapter besides the experimental information technical procedures as well as recent information concerning purification of the particular neurohormones and their mode of action are reported Numerous exhaustive tables allow the reader to get an overview of the matter while the major findings of the moment are presented in the conclusion of each chapter      What Does the Honeybee See? And How Do We Know? Adrian Horridge,2009-10-01 This book is the only account of what the bee as an example of an insect actually detects with its eyes Bees detect some visual features such as edges and colours but there is no sign that they reconstruct patterns or put together features to form objects Bees detect motion but have no perception of what it is that moves and certainly they do not recognize things by their shapes Yet they clearly see well enough to fly and find food with a minute brain Bee vision is therefore relevant to the construction of simple artificial visual systems for example for mobile robots The surprising conclusion is that bee vision is adapted to the recognition of places not things In this volume Adrian Horridge also sets out the curious and contentious history of how bee vision came to be understood with an account of a century of neglect of old experimental results errors of interpretation sharp disagreements and failures of the scientific method The design of the experiments and the methods of making inferences from observations are also critically examined with the conclusion that scientists are often hesitant imperfect and misleading ignore the work of others and fail to consider alternative explanations The erratic path to understanding makes interesting reading for anyone with an analytical mind who thinks about the methods of science or the engineering of seeing machines      **Union Catalogue of Scientific Periodicals in the Libraries of Pakistan** ,1995      □□□□□□□□ ,1976      **Scientific and Technical Books and Serials in Print** ,1989      **Smithsonian Miscellaneous Collections** Smithsonian Institution,1962      *Forthcoming Books* Rose Arny,1995-02      *The Publishers Weekly* ,1905      *Ecology Abstracts* ,1989 Indexes journal articles in ecology and environmental science Nearly 700 journals are indexed in full or in part and the database indexes literature published from 1982 to the present Coverage includes
