Contextualizing Entrepreneurship Theory Ted Baker, Friederike Welter, 2020-02-13 As the breadth and empirical diversity of entrepreneurship research have increased rapidly during the last decade the quest to find a one size fits all general theory of entrepreneurship has given way to a growing appreciation for the importance of contexts This promises to improve both the practical relevance and the theoretical rigor of research in this field Entrepreneurship means different things to different people at different times and in different places and both its causes and its consequences likewise vary For example for some people entrepreneurship can be a glorious path to emancipation while for others it can represent the yoke tethering them to the burdens of overwork and drudgery For some communities it can drive renaissance and vibrancy while for others it allows only bare survival In this book we assess and attempt to push forward contemporary conceptualizations of contexts that matter for entrepreneurship pointing in particular to opportunities generating new insights by attending to contexts in novel or underexplored ways This book shows that the ongoing contextualization of

entrepreneurship research should not simply generate a proliferation of unique theories one for every context but can instead result in better theory construction testing and understanding of boundary conditions thereby leading us to richer and more profound understanding of entrepreneurship across its many forms Contextualizing Entrepreneurship Theory will critically review the current debate and existing literature on contexts and entrepreneurship and use this to synthesize new theoretical and methodological frameworks that point to important directions for future research

**Handbook of Qualitative Research Methods in Entrepreneurship** Helle Neergaard, John P. Uhløi, 2007 the Handbook of Qualitative Research Methods in Entrepreneurship is an important contribution to the field and should be referenced in any paper using qualitative methodologies to investigate the entrepreneurial phenomenon Craig S Galbraith Journal of Enterprising Communities There is no hiding behind the ramparts of dry scholarship here The credibility of the theory being spoken of is not the stuff of constructed proofs but alignments of critical insight and utility This is where qualitative work can make a difference to the field and where this book makes its mark Robin Holt International Journal of Entrepreneurial Behaviour and Research The Handbook of Qualitative Research Methods in Entrepreneurship is an unusually solid and multifaceted book on what qualitative methods have done are doing and will do in entrepreneurship research Every serious entrepreneurship scholar should read it It points at the future Bjørn Bjerke University of Kalmar Sweden I would warmly recommend this unique collection of qualitative methods of entrepreneurship research to both mature and beginning researchers as a menu to choose from for their planned empirical studies For those who try to get away from only quantitative studies in both business practice and academic research this book is their chance to find a rich inspiration in reflecting on entrepreneurship as a lived experience using grounded theory and ethnographic discourse and narrative approaches It might convince editors of top journals of entrepreneurship research to welcome qualitative research submissions as an indispensable complement to quantitative only submissions This domain is not physics In bringing together such a variety of experts from so many nationalities in this Handbook our Danish colleagues are making entrepreneurship research a realistic global venture Jan Ulijn Eindhoven University of Technology The Netherlands Helle Neergaard and John Parm Uhløi have compiled a remarkable collection of work that both represents the range of methods and demonstrates the depth of insight that can be achieved through qualitative approaches This book is not simply a handbook of qualitative research methods though it well achieves this aim it is also an important contribution towards the field of entrepreneurship research From the Foreword by Sara Carter This expansive and practical Handbook introduces the methods currently used to increase the understanding of the usefulness and versatility of a systematic approach to qualitative research in entrepreneurship It fills a crucial gap in the literature on entrepreneurship theory and just as importantly illustrates how these principles and techniques can be appropriately and fruitfully employed The Handbook is underpinned by the belief that qualitative research has the potential to charter hitherto unexplored waters in the field of entrepreneurship and thus contribute significantly to its further

advancement The contributors seek to assist entrepreneurship researchers in making more informed choices and designing more rigorous and sophisticated studies They achieve this by providing concrete examples of research experiences and tangible how to advice By clarifying what these research methods entail how they are currently being used and how they can be evaluated this Handbook constitutes a comprehensive and highly accessible methodological toolbox Dealing with both well accepted qualitative approaches and lesser known rarer and more novel approaches to the study of entrepreneurship this Handbook will be invaluable to those studying researching and teaching entrepreneurship

**Entrepreneurship in the Region** Michael Fritsch, Jürgen Schmude, 2007-10-23 Entrepreneurship in the Region approaches many different aspects of entrepreneurship from a regional perspective The regional influences on entrepreneurship analyzed entail regional peculiarities and disparities in new business formation processes the success and the employment effects of new firms the importance of social capital and of network structures as well as entrepreneurship education and training provided in the regions The articles in this book provide strong evidence for the importance of regional factors that shape entrepreneurship and new firm formation processes It is shown that regional differences of start up rates and entrepreneurial attitudes are not at all elusive but tend to be rather persistent and prevail over longer periods of time The evidence clearly suggests that the regional level can be an appropriate starting point for entrepreneurship policy and that research on the issue may considerably benefit from properly accounting for the spatial dimension
