Biopolymer-Based Nanomaterials in Drug Delivery and Biomedical Applications Hriday Bera, Chowdhury Mobaswar Hossain, Sudipta Saha, 2021-01-05 Over the past few decades there has been unprecedented progress in the design of versatile biopolymer based nanoplatforms for pharmaceutical and biomedical applications, particularly due to their attractive traits including excellent biocompatibility, outstanding biodegradability, low immunogenicity and facile chemical modifiability. *Biopolymer Based Nanomaterials in Drug Delivery and Biomedical Applications* serves as a clear and detailed body of information on the synthesis and characterization of biopolymer based materials in nanomedicine. This book describes various nanomaterials consisting of biopolymers including polysaccharides (i.e. derived from plants, animals, bacteria, algae and fungi) and polypeptides in terms of their structures, synthetic protocols and characterization, and uses as therapeutic drugs and gene delivery carriers and in other biomedical fields. The chapters of this book, which are contributed by internationally renowned scholars working in the arena of biopolymer based nanomaterials, would offer a wide vision on the potential future applications of these nanomaterials in the delivery and targeting of bioactive molecules of pharmaceutical interests and in tissue engineering, biosensing, bioimaging and diagnostic purposes. The state-of-the-art information presented in the book would also encourage young investigators and researchers to further bring cutting edge developments in the field of nanomedicine in the near future. Provides a scholarly insight into the recent development of biopolymer based nanomaterials.

Focuses on the diverse cutting edge techniques for the fabrication of native and modified biopolymer based nanoplatfoms and their applications in drug delivery and biomedical fields Assesses the opportunities and challenges of biopolymer based nanocarriers in pharmaceutical and biomedical research Thermal and Energetic Studies of Cellular Biological Systems A. M. James,2016-07-29 Thermal and Energetic Studies of Cellular Biological Systems reviews literature on thermal and energetic changes which occur in living organisms It was commissioned at the suggestion of Dr Philip Edge of John Wright Sons and was a natural successor to the 1980 book Biological Microcalorimetry This volume is restricted to a discussion of energy changes in cellular systems This book is organized into nine chapters Each author presents a concise up to date account of his field of expertise Their topics include the usefulness of calorimetric methods in ecological studies growth and metabolism in bacteria and yeasts metabolism and heat dissipation in whole tissues or organs and animal cells and energy requirements in biological systems This book will be of interest to people seeking a non destructive technique for studying cellular system and it can serve as a guide and a reference book to those already active in the field **Carbohydrate Metabolism in Cultured Cells** M.J. Morgan,2013-11-11 It is perhaps obvious to any student of Biology that the discovery of chemical processes in whole organisms has usually preceded the elucidation of the component steps However it is perhaps less obvious that the unravelling of the sequences in which those chemical steps occur in living matter of the precise mechanisms involved and of the manner in which they are regulated would have been achieved neither by the study of intact plants and animals nor even of extracts derived from them Our ability to understand the nature and regulation of metabolism rests on two main premises the postulate that life processes can indeed be validly investigated with individual cells and cell free extracts and the thesis that there is an essential unity in biochemistry as Kluver put it 60 years ago that enables events in one organism to be legitimately studied in another Of particular utility in this latter respect has been the use of cultures of single celled organisms growing in defined media especially prokaryotes such as Escherichia coli and eukaryotes such as Neurospora and Saccharomyces sp to which both biochemical and genetical techniques could be applied It was of course Pasteur's observations of bacterial fermentations that first overthrew the belief that oxygen was essential for all energy yielding processes his recognition that La fermentation est La vie sans air laid the foundations of our knowledge of glycolysis **Salmonella** Bassam Annous,Joshua Gurtler,2012-07-18 The discovery of Salmonella in swine in 1885 marked the beginning of intense efforts to control salmonellae that have continued for the past 127 years The majority of foodborne outbreaks are caused by only a few of the 2500 known serovars While progress has been made on many fronts salmonellosis has yet to be eliminated in either developed or in developing nations This work represents the collective contributions of authors from all around the world Chapters in this book address a wide array of topics related to understanding and controlling this pathogen including Salmonella as studied in the environment air and in food products virulence and pathogenicity control by bacteriophages and other antimicrobials bacterial adaptation etc Bioindicators in

Ecotoxicological Studies Shahnawaz Ahmed, 2025-12-23 Bioindicators in Ecotoxicological Studies An Environmental Scientific Review presents an in depth analysis of how biological organisms function as indicators of environmental quality and pollutant impact The book systematically explores the physiological biochemical and ecological responses of selected species to various contaminants offering insights into their reliability as early warning systems in environmental assessment It integrates theoretical foundations with applied case studies across aquatic and terrestrial ecosystems emphasizing the practical use of bioindicators in monitoring programs environmental risk assessment and regulatory frameworks The content spans a broad spectrum of organisms including algae plants invertebrates fish amphibians and avian species highlighting their specific roles and sensitivity to different classes of pollutants Designed for researchers ecotoxicologists environmental scientists and postgraduate students this volume provides a comprehensive synthesis of current methodologies interpretive approaches and trends in bioindicator based ecotoxicological research It serves as a valuable academic reference for understanding biological responses to environmental stress and for developing scientifically sound approaches to ecosystem monitoring and management
