Advances in Polymer Blends and Alloys Technology, Volume II Kier Finlayson, 2018-12-13 From Reports in Volume 5 Recently polymer blends have emerged as one of the most important areas of research activity in the field of polymer science and technology Because of their satisfactory performance in meeting specific needs of the polymer industry they have drawn considerable attention in replacing not only many conventional materials but also some of the polymers that are in vogue By suitably varying the blend compositions and manipulating the processing conditions tailor made products with a unique set of end use properties can be achieved at a much lower cost and within a shorter time than would have been necessary for the development of a new polymer The usefulness of such blends increases with the increasing range of applications of this type of materials Chapter 4 New and growing demands on polymeric materials cannot be satisfied in future by an assortment extension of basic polymers Although the introduction of new major use basic polymer is possible it seems unlikely in view of current projected economic and technical considerations On the other hand new products based on the modification of existing polymers have and will continue to be fruitful areas for both scientific and commercial developments The driving forces for these developments are 1 Improved performance 2 Reduced cost 3 Present pending and future legislation dealing with health and environmental issues Chapter 11
