Advances in Probabilistic and Other Parsing Technologies H. Bunt,Anton Nijholt,2013-03-09 Parsing technology is concerned with finding syntactic structure in language In parsing we have to deal with incomplete and not necessarily accurate formal descriptions of natural languages Robustness and efficiency are among the main issuesin parsing Corpora can be used to obtain frequency information about language use This allows probabilistic parsing an approach that aims at both robustness and efficiency increase Approximation techniques to be applied at the level of language description parsing strategy and syntactic representation have the same objective Approximation at the level of syntactic representation is also known as underspecification a traditional technique to deal with syntactic ambiguity In this book new parsing technologies are collected that aim at attacking the problems of robustness and efficiency by exactly these techniques the design of probabilistic grammars and efficient probabilistic parsing algorithms approximation techniques applied to grammars and parsers to increase parsing efficiency and techniques for underspecification and the integration of semantic information in the syntactic analysis to deal with massive ambiguity The book gives a state of the art overview of current research and development in parsing technologies In its chapters we see how probabilistic methods have entered the toolbox of computational linguistics in order to be applied in both parsing theory and parsing practice The book is both a unique reference for researchers and an introduction to the field for interested graduate students **New Developments in Parsing Technology** H. Bunt,John Carroll,Giorgio Satta,2006-01-27 Parsing can be defined as the decomposition of complex structures into their constituent parts and parsing technology as the methods the tools and the software to parse automatically Parsing is a central area of research in the automatic processing of human language Parsers are being used in many application areas for example question answering extraction of information from text speech recognition and understanding and machine translation New developments in parsing technology are thus widely applicable This book contains contributions from many of today s leading researchers in the area of natural language parsing technology The contributors describe their most recent work and a diverse range of techniques and results This collection provides an excellent picture of the current state of affairs in this area This volume is the third in a series of such collections and its breadth of coverage should make it suitable both as an overview of the current state ofthe field for graduate students and as a reference for established researchers Computational Linguistics ,2001 **HLT 2001** James Allan,2001 Proceedings of the DARPA Human Language Technology research workshops Book Review Index ,2003 Vols 8 10 of the 1965 1984 master cumulation constitute a title index *American Book Publishing Record* ,2001 **Encyclopedia of Artificial Intelligence** ,2009-01-01 This book is a comprehensive and in depth reference to the most recent developments in the field covering theoretical developments techniques technologies among others Provided by publisher Pacific Symposium on Biocomputing ,2002 Association for Computational Linguistics 39th Annual Meeting and 10th Conference of the
