Ågerfalk,Matti Rossi,2014-06-03 While previously available methodologies for software like those published in the early days of object technology claimed to be appropriate for every

conceivable project situational method engineering SME acknowledges that most projects typically have individual characteristics and situations Thus finding the most effective methodology for a particular project needs specific tailoring to that situation Such a tailored software development methodology needs to take into account all the bits and pieces needed for an organization to develop software including the software process the input and output work products the people involved the languages used to describe requirements design code and eventually also measures of success or failure The authors have structured the book into three parts Part I deals with all the basic concepts terminology and overall ideas underpinning situational method engineering As a summary of this part they present a formal meta model that enables readers to create their own quality methods and supporting tools In Part II they explain how to implement SME in practice i e how to find method components and put them together and how to evaluate the resulting method For illustration they also include several industry case studies of customized or constructed processes highlighting the impact that high quality engineered methods can have on the success of an industrial software development Finally Part III summarizes some of the more recent and forward looking ideas This book presents the first summary of the state of the art for SME For academics it provides a comprehensive conceptual framework and discusses new research areas For lecturers thanks to its step by step explanations from basics to the customization and quality assessment of constructed methods it serves as a solid basis for comprehensive courses on the topic For industry methodologists it offers a reference guide onfeatures and technologies to consider when developing in house software development methods or customising and adopting off the shelf ones
