Advances Parallel Algorithms:

Advances in Parallel Algorithms Ivan Dimov,O. Tonev,1994 This text presents an overview of research in the subjects of computational linear algebra Monte Carlo algorithms and parallel algorithms in discrete mathematics Topics covered include theoretical investigations of numerical analysis and parallel algorithms and practical large scale problem solving such as modelling of semiconductor devices ballistic trajectory estimations and the simulation of distributed memory parallel computers   *Advances in Parallel Algorithms* Lydia Kronsjö,1992 Mathematics of Computing Parallelism   Advances in Randomized Parallel Computing Panos M. Pardalos,Sanguthevar Rajasekaran,2013-12-01 The technique of randomization has been employed to solve numerous prob lems of computing both sequentially and in parallel Examples of randomized algorithms that are asymptotically better than their deterministic counterparts in solving various fundamental problems abound Randomized algorithms have the advantages of simplicity and better performance both in theory and often in practice This book is a collection of articles written by renowned experts in the area of randomized parallel computing A brief introduction to randomized algorithms In the aflalysis of algorithms at least three different measures of performance can be used the best case the worst case and the average case Often the average case run time of an algorithm is much smaller than the worst case 2 For instance the worst case run time of Hoare s quicksort is O n whereas its average case run time is only O n log n The average case analysis is conducted with an assumption on the input space The assumption made to arrive at the O n log n average run time for quicksort is that each input permutation is equally likely Clearly any average case analysis is only as good as how valid the assumption made on the input space is Randomized algorithms achieve superior performances without making any assumptions on the inputs by making coin flips within the algorithm Any analysis done of randomized algorithms will be valid for all p0 sible inputs   Advanced Parallel Processing Technologies Olivier Temam,Pen-chung Yew,Binyu Zang,2011-09-09 This book constitutes the refereed proceedings of the 9th International Symposium on Advanced Parallel Processing Technologies APPT 2011 held in Shanghai China in September 2011 The 13 revised full papers presented were carefully reviewed and selected from 40 submissions The papers are organized in topical sections on parallel distributed system architectures architecture parallel application and software distributed and cloud computing
