Infant Crying B.M. Lester,C.F.Z. Boukydis,1985-05-31 The cries of infants and children are familiar to essentially all adults and we all have our own common sense notions of the meanings of various cries at each age level As is often the case in the study of various aspects of human behavior we often investigate what seems self-evident to the general public For example if an infant cries he or she needs attention if the cry is different than usual he or she is sick and when we are upset by other matters children's crying can be very annoying As a pediatric clinician often faced with discussing with parents their concerns or lack of them with respect to their children's crying these usual commonsense interpretations were frequently inadequate As this book illustrates when we investigate such everyday behaviors as children's crying and adults' responses to crying the nature of the problem becomes surprisingly complex As a pediatrician working in the newborn nursery early in my career I knew from pediatric textbooks and from nursery nurses that newborn infants with high pitched cries were often abnormal In order to teach this interesting phenomenon to others and to understand under what circumstances it occurred I found I needed to know what constituted a high pitched cry or even a normal cry for that matter and how often this occurred with sick infants Certainly I saw sick infants who did not have high pitched cries but I still wondered if their cries were deviant in some other way
