Cracking the MAT 1998 Marcia Lerner, Princeton Review (Firm), 1997 Proven techniques for scoring high from the country's leading test prep company 7 Complete Sample Tests Included A thorough review of the general knowledge covered by the MAT Tips for avoiding traps by thinking like the test makers Strategies for overcoming the test's cultural biases Techniques to help you earn points The only book with online support see back cover Why should I buy this book There are other MAT books on the shelves Some are significantly thicker than this one But you should put them back and buy Cracking the MAT Other books are long because they are unfocused rather than raise your scores they will overwhelm you with thousands of questions that have nothing to do with the actual MAT exam Cracking the MAT offers in depth instruction on the skills covered by the MAT exam Then it shows you how to use that knowledge to quickly attack and answer test questions We won't waste your time Everything in this book will help raise your score on the MAT exam We spend over two million dollars a year in research and development to make sure that Princeton Review students receive thoroughly tested up to date materials No one can raise scores as we can Our techniques are based on a thorough analysis of the most recent exams And when the tests change we change Read this book Practice our techniques on a real exam And if you need more personal attention we can tutor you Whatever you do we wish you good luck Who is The Princeton Review Ask the 70 000 students who took our intensive six week courses last year Or the millions who bought our books They'll tell you The Princeton Review means the best in test prep Our courses are Personal Our classes are grouped by shared test taking strengths and weaknesses and consist of eight to fifteen students You'll work at your own pace And if you don't understand a concept we'll work with you in person until you do Efficient The Princeton Review is a systematic approach to solving test problems We combine solid academic preparation with revolutionary test taking techniques to maximize scores And Effective The Princeton Review guarantees results if you complete the course take the test and are not satisfied with your score we'll work with you again free Backing our courses and our books and software is over two million dollars a year in training and research No one knows standardized tests better than we do And no student is better prepared than a Princeton Review student Student Advantage A unique service that can supplement your education and save you money For information call us at 1 800 FON INFO For information about The Princeton Review Call toll free in the United States 1 800 REVIEW 6 For international calls Please refer to the back of this book Praise for The Princeton Review One thing the jousting between the testing service and The Princeton Review has made clear is that coaching for tests is as much a part of the admissions process as interviews The New York Times The Princeton Review has already become legendary among high school and college students Rolling Stone The Princeton Review has put ETS on the defensive The New Republic The Princeton Review the mecca of higher learning MTV Anyone who's ever taken a standardized exam will recognize the obvious usefulness of The Princeton Review's advice The Wall Street Journal Free online assistance www.review.com We'll respond to your questions

Convention, 1962 **Performance Evaluation of Corrosion Inhibitors and Galvanized Steel in Concrete Exposure Specimens** Jerzy Zemajtis, 1999 Corrosion inhibitor admixtures CIA and galvanized reinforcing steel GS are used for the corrosion protection for reinforced concrete bridges The results of a 3 5 year evaluation of exposure specimens containing CIA from three different manufacturers and GS are presented The specimens were built to simulate four exposure conditions typical for concrete bridges located in the coastal region or inland where deicing salts are used The exposure conditions were

Horizontal Vertical Tidal and Immersed Zones The specimens were kept inside the laboratory and were exposed to weekly ponding cycles of 6% sodium chloride solution by weight The methods used to assess the condition of the specimens included chloride concentration measurements corrosion potentials and corrosion rates Additionally visual observations were performed for identification of rust stains and cracking on concrete surfaces The results of chloride testing indicate that the amount of chlorides present at the bar level is more than sufficient to initiate corrosion Chloride and rapid permeability data indicate no significant difference either in a rate of chloride ingress or in the diffusion coefficients for concretes with and without CIA Corrosion potentials were the most negative for the Bare Steel BS specimen prepared with the Armatec 2000 corrosion inhibitor and generally indicated a 90% probability of active corrosion Corrosion potentials were similar for the two BS control specimens and the BS specimen prepared with Rheocrete 222 and generally indicated an uncertain probability of corrosion Corrosion potentials were the least negative for the BS specimen prepared with DCI S corrosion inhibitor and generally indicated a 90% probability of no corrosion Rate of corrosion measurements were the highest for the BS control specimens and the one prepared with A2000 and the most recent data suggest corrosion damage in 2 to 10 years Although early rate of corrosion measurements were higher or about the same as for BS control specimens recent measurements were slightly lower for the specimen prepared with Rheocrete 222 and suggest corrosion damage in 10 to 15 years Rate of corrosion measurements were consistently the lowest for the BS specimens prepared with DCI S and indicate corrosion damage is expected in 10 to 15 years The corrosion potential and rate of corrosion data indicate that DCI S is the only CIA evaluated that clearly provides some level of corrosion protection A direct comparison of the GS specimens to the BS specimens is not possible because the measured potential refers to the zinc oxide and not to the steel Nevertheless the potential data agree with the chloride and permeability data as well as with the visual observations and indicate the damaging effect of a high concentration of chloride ions on the GS At low and moderate chloride exposures however GS does provide corrosion protection Recommendations are to continue monitoring until sufficient cracking has occurred in all specimens to provide for making a better estimate of the service lives of CIA and GS used in the construction of concrete bridge components in Virginia The specimens with CIA and one control continuous reinforcement in the legs should be taken to the Hampton Road North Tunnel Island and placed in the brackish water to a depth of the Immersed Zone at low tide for further exposure to chloride The specimens with GS and the other control non continuous reinforcement in the legs should remain in an outdoor exposure in Southwest Virginia like the Civil Engineering Materials Research Laboratory in Blacksburg Virginia
