Captured Imagination:

Captured Futures Maarten A. Hajer, Jeroen Oomen, 2025-05-14 Environmental politics as we know it cannot deliver. Despite all efforts, politics is unable to bend the ecological trends. Maarten A. Hajer and Jeroen Oomen argue that this is because environmental politics is captured. This capture doesn't just express itself in lobbying or a lack of political will, but in a capture of the imagination: we seem unable to imagine futures that are meaningfully different from the present. Examining environmental politics as drama reveals how all actors play their particular roles in this capture: scientists funnel narrow policy futures through their models; activists adopt politically expedient language; and policymakers look for safe, technologically sound, win-win solutions. All are captured in a regime of ecological modernization that entertains too narrow a solution space. For Hajer and Oomen, this is cause for concern: we have entered a radical age in which persistent policy failure leads to increased suggestions to engage with speculative geoengineering technologies in a desperate attempt to safeguard the future. On the other hand, they point at the growing societal backlash against environmental policies. Yet in the third part of the book, discourse and dramaturgical analysis appear as a reason for hope, sketching an alternative perspective on environmental politics. It suggests that a new, more cultural approach to environmental politics could have more leverage on the societal imagination. Combining this with the formulation of new discourses and using alternative dramaturgies of change, *Captured Futures* highlights how to find more effective and more inspiring ideas about how to approach the future and ultimately liberate environmental politics.

[Engaging Imagination and Developing Creativity in Education](#) Krystina Madej, 2009-12-14 Imagination is the Source of Creativity and Invention. This series of essays has been collected expressly to bring readers new ideas about imagination and creativity in education that will both stimulate discussion and debate and also contribute practical ideas for how to infuse our daily classrooms with imaginative activities. In a world that values creative innovation, it is distressing that our schools are dominated by an educational paradigm that pays too little attention to engaging the imagination and emotions of students in the curriculum and the world's challenges that the curriculum is designed to prepare students to meet. The ability of children to think creatively, to be innovative, enterprising, and capable depends greatly on providing a rich, imagination-based educational environment. It is only when we consider the imagination a vital component of our lives and one of the great workhorses of learning that we recognize the importance of adding the imaginative to the study of the affective, cognitive, and physical modes of our development. Doing so fills a gap that has led to incomplete accounts of children's development, their subsequent learning needs, and indeed how to fulfill these needs in educational environments. This discussion about the importance of imagination and creativity in education has been taken up by researchers and educators around the world. It is represented here by writings from authors from Brazil, Canada, China, Denmark, Italy, Israel, Japan, and Romania. In the first part of this book, these authors explore and discuss theories of development, imagination, and creativity. In the second part, they extend these theories to broader social issues, such as

responsible citizenship gender and special needs education to new approaches to curriculum subjects such as literacy science and mathematics and to the educational environment of the museum
