Birds Of Prey A Survival:

Neotropical Birds of Prey David F Whitacre, 2013-03-01 Until recently surprisingly little has been known about the biology and behavior of tropical forest raptors including such basic aspects as diets breeding biology habitat requirements and population ecology information critical to the development of conservation efforts The Peregrine Fund conducted a significant eight year long research program on the raptor species including owls in Tikal National Park in Guatemala to learn more about Neotropical birds of prey Impressive and unprecedented in scale this pioneering research also involved the development of new methods for detecting enumerating and studying these magnificent but often elusive birds in their forest home Beautifully illustrated with photographs of previously little known species the resulting book is the most important single source for information on the lowland tropical forest raptor species found in Central America Neotropical Birds of Prey covers twenty specific species in depth including the Ornate Hawk Eagle the Barred Forest Falcon the Bat Falcon and the Mexican Wood Owl offering thorough synopses of all current knowledge regarding breeding biology and behavior diet habitat use and spatial needs Contributors to this landmark work also show how the populations fit together as a community with overlapping habitat and prey needs that can put them in competition with reptiles and mammalian carnivores as well yet differ from one another in their nesting or feeding behaviors and population dynamics The work s substantive original data offer interesting comparisons between tropical and temperate zone species and provide a basis for establishing conservation measures based on firsthand research Making available for the first time new data on the biology ecology behavior and conservation of the majestic owls and raptors of the New World tropics this book will appeal to a wide ornithological readership especially the many raptor enthusiasts around the world

The Survival World of Birds John Gooders, 1992 Why are hummingbirds found only in the Americas while the Osprey inhabits virtually every continent Why does the Arctic Tern migrate enormous distances yet the Red Grouse rarely strays more than a mile from its birthplace Why do the northern auks and southern penguins look so alike Why have some birds and not others radiated into different species and subspecies Numbering nearly 9 000 species worldwide birds exhibit an astonishing diversity Through John Gooders lucid examination of the similarities and differences between the birds of each continent this volume explores the many puzzles of bird behavior and distribution Fascinating insights are provided into bird behavior such as the larders of food stored by Eleonora s Falcon the elaborate courting ritual of Australasia s bowerbirds and looking ahead the final chapter takes a realistic view on the future of birds and their survival alongside humans Illustrated with over 220 stunning color photographs maps and diagrams The Survival World of Birds is a superb celebration of the most exciting and variable group of animals on earth
