Computational and Cognitive Strategies for Word Sense Disambiguation Oi Yee Kwong,2012-08-11 Cognitive and Computational Strategies for Word Sense Disambiguation examines cognitive strategies by humans and computational strategies by machines for WSD in parallel Focusing on a psychologically valid property of words and senses author Oi Yee Kwong discusses their concreteness or abstractness and draws on psycholinguistic data to examine the extent to which existing lexical resources resemble the mental lexicon as far as the concreteness distinction is concerned The text also investigates the contribution of different knowledge sources to WSD in relation to this very intrinsic nature of words and senses *Cognitive Approach to Natural Language Processing* Bernadette Sharp,Florence Sedes,Wieslaw

Lubaszewski,2017-05-31 As natural language processing spans many different disciplines it is sometimes difficult to understand the contributions and the challenges that each of them presents This book explores the special relationship between natural language processing and cognitive science and the contribution of computer science to these two fields It is based on the recent research papers submitted at the international workshops of Natural Language and Cognitive Science NLPCS which was launched in 2004 in an effort to bring together natural language researchers computer scientists and cognitive and linguistic scientists to collaborate together and advance research in natural language processing The chapters cover areas related to language understanding language generation word association word sense disambiguation word predictability text production and authorship attribution This book will be relevant to students and researchers interested in the interdisciplinary nature of language processing Discusses the problems and issues that researchers face providing an opportunity for developers of NLP systems to learn from cognitive scientists cognitive linguistics and neurolinguistics Provides a valuable opportunity to link the study of natural language processing to the understanding of the cognitive processes of the brain

Mind Matters in SLA Clare Wright,Thorsten Piske,Martha Young-Scholten,2018-09-21 This book examines key issues in theories of what language is and what happens in the mind during second language acquisition SLA inspiring readers to think in new and exciting ways about language learning and teaching Chapters written by both established and rising star scholars provide cutting edge insights and new empirical findings on major topics of formal and cognitive linguistics psycholinguistics and second language development and offer a coherent wide ranging reader friendly examination of learner internal factors in SLA The first section of the book focuses on issues that are pertinent to our understanding of language acquisition particularly in relation to syntax The second section comprises empirical chapters on

syntax the lexicon phonetics phonology and language production in English and other languages These chapters refer to theories and frameworks from within SLA to enable the reader to grasp the key questions and issues that are currently relevant The final section focuses on research relating to how second language L2 learners make transitions from one stage of development to the next it covers state of the art psycholinguistic research concerning how L2 acquisition occurs in real time and includes discussion of models of L2 development both in and out of the classroom

Semantic Knowledge and Semantic Representations Rosaleen A. McCarthy, 1995 What is the basis of our ability to assign meanings to words or to objects Such questions have until recently been regarded as lying within the province of philosophy and linguistics rather than psychology However recent advances in psychology and neuropsychology have led to the development of a scientific approach to analysing the cognitive bases of semantic knowledge and semantic representations Indeed theory and data on the organisation and structure of semantic knowledge have now become central and hotly debated topics in contemporary psychology This special issue of *Memory* brings together a series of papers from established laboratories that are at the forefront of semantic memory research The collection includes papers presenting theoretical overviews of the field as well as papers containing new experimental findings A variety of approaches to the problems of analysing semantic knowledge and semantic representations are included in this volume For example experimental studies of normal subjects are included together with neuropsychological investigations of patients with impaired semantic memory and computational models of the representation of knowledge in normality and disease This collection will therefore be essential reading for researchers and others who are interested in memory function It will also be of interest to cognitive scientists linguists philosophers and others who have puzzled over the many complex and central questions that probe the roots of our ability to understand meaning

Word Sense Selection in Texts Oi Yee Kwong, 2000 Abstract Early systems for word sense disambiguation WSD often depended on individual tailor made lexical resources hand coded with as much lexical information as needed but of severely limited vocabulary size Recent studies tend to extract lexical information from a variety of existing resources e.g machine readable dictionaries corpora for broad coverage However this raises the issue of how to combine the information from different resources Thus while different types of resource could make different contribution to WSD studies to date have not shown what contribution they make how they should be combined and whether they are equally relevant to all words to be disambiguated This thesis proposes an Integrated Model as a framework to study the inter relatedness of three major parameters in WSD Lexical Resource Contextual Information and Nature of Target Words We argue that it is their interaction which shapes the effectiveness of any WSD system A generalised structurally based sense mapping algorithm was designed to combine various types of lexical resource This enables information from these resources to be used simultaneously and compatibly while respecting their distinctive structures In studying the effect of context on WSD different semantic relations available from the combined resources were used and a recursive filtering algorithm was designed to

overcome combinatorial explosion We then investigated from two directions how the target words themselves could affect the usefulness of different types of knowledge In particular we modelled WSD with the cloze test format i e as texts with blanks and all senses for one specific word as alternative choices for filling the blank A full scale combination of WordNet and Roget s Thesaurus was done linking more than 30 000 senses Using these two resources in combination a range of disambiguation tests was done on more than 60 000 noun instances from corpus texts of different types and 60 blanks from real cloze texts Results show that combining resources is useful for enriching lexical information and hence making WSD more effective though not completely Also different target words make different demand on contextual information and this interaction is closely related to text types Future work is suggested for expanding the analysis on target nature and making the combination of disambiguation evidence sensitive to the requirements of the word being disambiguated Proceedings of the 34th Annual Boston University Conference on Language Development Katie Franich, Kate M. Iserman, Lauren L. Keil, 2010 The 34th annual Boston University Conference on Language Development was held November 6-8 2009 in Boston MA The proceedings contain 45 of the papers presented at the conference The two volume set covers a wide range of research in language acquisition and language development *Proceedings of the Nineteenth Annual Conference of the Cognitive Science Society* Michael G. Shafto, Pat Langley, 1997 This volume features the complete text of the material presented at the Nineteenth Annual Conference of the Cognitive Science Society Papers have been loosely grouped by topic and an author index is provided in the back As in previous years the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals presenting a multifaceted view of cognitive science In hopes of facilitating searches of this work an electronic index on the Internet s World Wide Web is provided Titles authors and summaries of all the papers published here have been placed in an online database which may be freely searched by anyone You can reach the web site at www.csli.stanford.edu/cogsci97 **Cognition and Language** Claire M. Fletcher-Flinn, Gus M. Haberman, 2006 This volume marks the first comprehensive collection of reports from research projects in cognitive psychology in New Zealand The existence of such a book is a reflection of the remarkable and ongoing growth in cognitive inquiry in this part of the world Although most influential models and theories on cognition have originated in North America and Europe the last two decades have seen an upsurge of cognitive research in the Australasian region *Cognition and Language* is intended to make accessible and integrate theoretically significant outcomes of cognitive science in New Zealand research centres Our intention was to edit the first volume on the international publishing scene reflecting the depth quality and some of the thematic diversity of cognitive psychology in New Zealand centres It reflects some of the perspectives and approaches that New Zealand scientists take to internationally well recognised cognitive topics It also indicates more unique themes that are investigated reliant on the Australasian context In particular the book is meant to integrate studies in the technical field of perception the interfaces between cognition and language psycholinguistics

psychology of communication and cognitive developmental studies three domains that become increasingly salient in New Zealand cognitive science *UEA Papers in Linguistics* University of East Anglia,1978 **The Cumulative Book Index**,1997 A world list of books in the English language The Quarterly Journal of Experimental Psychology ,1998 The British National Bibliography Arthur James Wells,1996 Norms of Word Association Leo Postman,Geoffrey Keppel,2014-05-10 Norms of Word Association contains a heterogeneous collection of word association norms This book brings together nine sets of association norms that were collected independently at different times during a 15 year period Each chapter is a self contained unit The order in which the norms are presented is arbitrary although an attempt is made to group together norms that seem to belong together The 1952 Minnesota norms are presented first due to age and in recognition of the fact that a number of the norms that follow are direct outgrowths of this work The next three norms in this collection are responses to the Russell Jenkins stimuli obtained from subjects representing different linguistic communities A summary of association norms collected from British and Australian subjects are reported along with association norms from German and French college students and French workmen Four sets of norms that are not directly related to the 1952 Minnesota collection are included The text will be of interest to historians and researchers in the field of verbal learning and verbal behavior *Word Association Norms* Palermo,1964 Studies in Second Language Acquisition ,1997-03 **Morphé** ,1999 **Giornale Italiano di Psicologia** ,2002 **Bulletin of the British Psychological Society** British Psychological Society,1970
