Birds And Mammals:

The Art of Audubon John James Audubon, 1979 [The Behaviour of Birds, Mammals and Fish](#) Stewart Martin Evans, 1970 *Birds and Mammals of the Sierra Nevada* Lowell Sumner, Joseph S. Dixon, 2023-04-28

Birds and Mammals of the Sierra Nevada chronicles decades of ecological and zoological research conducted in Sequoia and Kings Canyon National Parks tracing its origins to a 1916 expedition by the Museum of Vertebrate Zoology at the University of California. The book provides an in depth account of wildlife surveys across varied ecosystems detailing the collection and identification of specimens including birds mammals reptiles and amphibians. From the early Sequoia Survey to expanded research conducted by renowned zoologists like Joseph S Dixon and Adolph Murie the volume synthesizes a wealth of field data and life history observations. This work bridges early cross sectional studies such as those on Yosemite and Lassen regions with ecological studies conducted through the mid 20th century offering a comprehensive view of the Sierra s biodiversity and environmental dynamics. Prepared under the auspices of the National Park Service and enriched by collaboration with scientists park staff and naturalists this volume goes beyond species descriptions. It incorporates ecological insights behavioral studies and critical updates to nomenclature ensuring accuracy for both professional and casual readers. The publication integrates specimen photographs detailed accounts of fieldwork and expertly curated data from museum collections. With contributions from notable figures in vertebrate zoology and botany and input from dedicated park rangers the book is an invaluable resource for understanding the rich natural heritage of the Sierra Nevada aimed at both enhancing public knowledge and supporting future research. This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact. Aldo Starker Leopold, 1959 [Antipredator Defenses in Birds and Mammals](#) Tim Caro, 2005-09-01

In nature the ability to defend against predators is fundamental to an animal s survival. From the giraffes that rely on their spotted coats to blend into the patchy light of their woodland habitats to the South American sea lions that pile themselves in heaps to ward off the killer whales that prey on them in the shallow surf defense strategies in the animal kingdom are seemingly innumerable. In *Antipredator Defenses in Birds and Mammals* Tim Caro ambitiously synthesizes predator defenses in birds and mammals and integrates all functional and evolutionary perspectives on antipredator defenses that have developed over the last century. Structured chronologically along a hypothetical sequence of predation Caro evokes a gazelle fawn desperate to survive a cheetah attack to illustrate the continuum of the evolution of antipredator defenses. *Antipredator Defenses in Birds and Mammals* considers the defenses that prey use to avoid detection by predators the benefits of living in groups morphological and behavioral defenses in individuals and groups and finally flight and adaptations of last resort. *Antipredator Defenses in*
