

Fluid Dynamics

-governing equations-

- Based on conservation laws of mass, momentum and energy
- Applied on a small fluid element; control volume (CV)
- Conservation of mass (continuity eqn):

$$\frac{\partial}{\partial t} \int_V \rho dV = \int_S \rho \mathbf{U} \cdot d\mathbf{S}$$

the rate of change of mass = net flow through the boundaries of the volume

(the control volume is fixed in space)

Dynamics Of Heat:

The Dynamics of Heat Hans U. Fuchs, 1996-02-23 Based on a course given to beginning physics chemistry and engineering students at the Winterthur Polytechnic Institute this text approaches the fundamentals of thermodynamics from the viewpoint of continuum mechanics By describing physical processes in terms of the flow and balance of physical quantities the book provides a unified approach to hydraulics electricity mechanics and thermodynamics In this way it becomes clear that the entropy is the fundamental property that is transported in thermal processes and that the temperature is its measure Previous knowledge of thermodynamics is not required but readers should be familiar with basic electricity mechanics and chemistry and should have some knowledge of elementary calculus Both the theory and applications are included as well as many exercises and solved problems from various fields of science and engineering

The Dynamics of Heat Hans U. Fuchs, 2010-11-18 Based on courses for students of science engineering and systems science at the Zurich University of Applied Sciences at Winterthur this text approaches the fundamentals of thermodynamics from the point of view of continuum physics By describing physical processes in terms of the flow and balance of physical quantities the author achieves a unified approach to hydraulics electricity mechanics and thermodynamics In this way it becomes clear that entropy is the fundamental property that is transported in thermal processes i e heat and that temperature is the corresponding potential The resulting theory of the creation flow and balance of entropy provides the foundation of a dynamical theory of heat This extensively revised and updated second edition includes new material on dynamical chemical processes thermoelectricity and explicit dynamical modeling of thermal and chemical processes To make the book more useful for courses on thermodynamics and physical chemistry at different levels coverage of topics is divided into introductory and more advanced and formal treatments Previous knowledge of thermodynamics is not required but the reader should be familiar with basic electricity mechanics and chemistry and should have some knowledge of elementary calculus The special feature of the first edition the integration of thermodynamics heat transfer and chemical processes has been maintained and strengthened Key Features First revised edition of a successful text reference in fourteen years More than 25 percent new material Provides a unified approach to thermodynamics and heat transport in fundamental physical and chemical processes Includes worked examples questions and problem sets for use as a teaching text or to test the reader's understanding Includes many system dynamics models of laboratory experiments
