Geometric Applications of Homotopy Theory II M.G. Barratt, M.E. Mahowald, 2006-11-15 *Paperbound Books in Print*, 1991 **Books in Print**, 1981 *Topological Modular Forms* Christopher L. Douglas, John Francis, André G. Henriques, Michael A. Hill, 2014-12-04 The theory of topological modular forms is an intricate blend of classical algebraic modular forms and stable homotopy groups of spheres The construction of this theory combines an algebro geometric perspective on elliptic curves over finite fields with techniques from algebraic topology particularly stable homotopy theory It has applications to and connections with manifold topology number theory and string theory This book provides a careful accessible introduction to topological modular forms After a brief history and an extended overview of the subject the book proper commences with an exposition of classical aspects of elliptic cohomology including background material on elliptic curves and modular forms a description of the moduli stack of elliptic curves an explanation of the exact functor theorem for constructing cohomology theories and an exploration of sheaves in stable homotopy theory There follows a treatment of more specialized topics including localization of spectra the deformation theory of formal groups and Goerss Hopkins obstruction theory for multiplicative structures on spectra The book then proceeds to more advanced material including discussions of the string orientation the sheaf of spectra on the moduli stack of elliptic curves the homotopy of topological modular forms and an extensive account of the construction of the spectrum of topological modular forms The book concludes with the three original pioneering and enormously influential manuscripts on the subject by Hopkins Miller and Mahowald **Scientific and Technical Books and Serials in Print**, 1989 **On Thom Spectra, Orientability, and Cobordism** Yu. B. Rudyak, 2007-12-12 Rudyak's groundbreaking monograph is the first guide on the subject of cobordism since Stong's influential notes of a generation ago It concentrates on Thom spaces spectra orientability theory and cobordism theory including cobordism with singularities and in particular Morava K theories These are all framed by cohomology theories and spectra The author has also performed a service to the history of science in this book giving detailed attributions *Books in Print Supplement*, 1994 **E [sign for Infinity] Ring Spaces and E [sign for Infinity] Ring Spectra** J. volume presents the proceedings of the conference held in honor of J Michael Boardman s 60th birthday It brings into print his classic work on conditionally convergent spectral sequences Over the past 30 years it has become evident that some of the deepest questions in algebra are best understood against the background of homotopy theory Boardman and Vogt s theory of homotopy theoretic algebraic structures and the theory of spectra for example were two benchmark breakthroughs underlying the development of algebraic K theory and the recent advances in the theory of motives The volume begins with short notes by Mac Lane May Stasheff and others on the early and recent history of the subject But the bulk of the volume consists of research papers on topics that have been strongly influenced by Boardman s work Articles give readers a vivid sense of the current state of the theory of homotopy invariant algebraic structures Also included are two major foundational papers by Goerss and Strickland on applications of methods of algebra i e Dieudonn modules and formal schemes to problems of topology Boardman is known for the depth and wit of his ideas This volume is intended to reflect and to celebrate those fine characteristics Mathematical Reviews ,2000 **Proceedings of Symposia in Pure Mathematics** ,1978 **Proceedings of the American Mathematical Society** American Mathematical Society,1978 Contains the material formerly published in even numbered issues of the Bulletin of the American Mathematical Society *Bulletin of the American Mathematical Society* ,1977
