I. INTRODUCTION

According Wiyani (2014: 32) cited Antari KY et al "Early childhood is a child who is born until the age of 6 years" early childhood is the most good time to get a new knowledge. This age is an age that is decisive in shaping the character and personality of the child. Early childhood is the age when children experiencing rapid growth and development.

Early childhood education is the provision of an effort to stimulate, guiding, nurturing and providing learning activities that will result in the ability and skills of the child (Sajiono, Yuliani Conscience, 2009: 7). Efforts in providing stimulus to produce ability and skills, then there are some aspects that could be given stimulus, in permendikbud No. 146 2014, there are six aspects of early childhood development: (1) religion and moral values, (2) cognitive, (3) language, (4) Physical motor, (5) social -emotional and (6) art. Six aspects of these developments can be developed to provide a natural stimulus age-appropriate development.

One of the aspects mentioned above are cognitive, according Supartini E and Wani D (2017) covers the cognitive development of children how to think, how children view their world, and about how children use playing equipment and materials for the study, which aimed to make children can learn to solve problems, think logically and symbolic thinking. Developing cognitive aspect as a part of the basic mathematical knowledge for early childhood.

Recent mathematics teaching, children are often asked to memorize the geometric shapes, numbers, amount, variety of symbols and language of mathematics, without understand the underlying principles. If this happens, then it is very likely the child will experience difficulties when entering the 3rd grade. And then that's when we realized that children are in fact not understand the basic concepts of mathematics.

According to Bieber, KW (2011) Children have started to develop the mathematical concept of a variety of daily activities. For example, when a baby, small child knows that he and his father while the mother is great, even

though the children can not express it in the spoken language.

When she was a toddler (under three years), the child knows that if he accumulates a beam on beam else then beam will multiply (so two) even though he can not express it in the spoken language. Kids also knew that he had two beams and her friend had ten beams, then his beams more so that the child wants to take it from their friends. In addition, children often choose their own toys even though he did not know the basis of his election. Kids also know his schedule in a day when it is done regularly.

Mastery of early math by an early childhood is important because it is only a principle to help students understand the concepts of higher mathematics. Early mathematical learning gained through direct experience in an atmosphere encouraging and meaningful which able to cultivate student interest to learn mathematics. According to Haryuni, S. (2013), Children have come to know and explore the various dimensions that cannot be separated from the mathematical number of the world they are, good to mention , recognize the concept or familiar symbol. It will help the child to life outside the school and will provide a solid foundation in learning in school.

II. THE NATURE OF MATHEMATICS

Mathematics is human knowledge needed to carry out their everyday lives. For example ranging from waking someone looking at the numbers contained on the clock to see what time it was, when shop then we will vote and count the number of items to be purchased and the price paid. As she walked away, we need to remember the street where that will be visited, how long away, and choose the path more can quickly reach the destination, etc.

According to Piaget quoted Charlesworth, R (2005) children acquire the knowledge to build it through their interaction with the environment, and Piaget divides knowledge into three areas of knowledge into three areas:

1. Physical knowledge is the type that includes learning about objects in the environment and their characteristics (color, weight, size, texture,
